

Strange and Wonderful TRINITY; Or, A Triplicity of Stupendious Prodigies, confifting of a Wonderful Ecliple, as well as of a wonderful Comet, and of a

wonderful Conjunction, now in its second return, Gc.

S the first Conjunction of Saturn and Jupiter in October the last; was uffered into the World by a frightful Blazing Comet, fo their second Conjunction is attended with the two formidable Eclipses of the two great Luminaries of the Heavens. The first of the Sun going before it, upon the 17th of this present fanuary; and the second of the Moon coming after it, upon the first of February follow-Infomuch that this middle Conjunction (feeing these two superior Planets will again have their third and last Conjunction upon the second of May next) is made the more Illustrious by a double Deliquium, or ECLIPSE of both the Sun and Moon, within a few days of it, before and after, it happening betwirt the twentieth and thirtieth of this fanuary. All: which have this Itrange concurrency, to render this prefent Conjunction: the more conspicuous, and to be of greater Observation and Authority to

its Spectators.

I have early and late taken my firidest Profpect of the Progres and Regref that thefe two great Planets have made fince their last October Conjunction; and I have observed they have been running Retrograde, untill at length they came into an equal distance each from other, and from the Lions Heart in a direct line, fo that then these three great Stars in this posture and situation did represent the exact Form of Orions Girdle (which the vulgar call the Ladys Yard-wand, bright Jupiter being the middle Nail, Cor Leonis and fullen Saturn were the two end- Nails of that Celestial Yard-staff. Then Supiter marcheth off from his middle Station to'a farther diffance from that fixed Star the Lions Heart, and the two wandering Stars Saturn and Jupiter make a nearer approach each toother all Detember last, and all this January hitherto: I have beheld every clear Evening, thefe two Planets ariting in a perpendicular posture, but in the Morning towards their fetting, they have a traverfe Afpect, running near the fame line in the Heavens, where famons Arthurus runneth, and

every Night, they come nearer and nearer each other, until they shall within a few days compleat their fecond Conjunction, which will happen near the same time that the two great Luminaries (the Sun and the Moon) shall have their compleat Conjunction also, so that the Body of the Moon interpofeth it felf betwixt our Sight and the Sun, and cover its Light and Luftre from us full nine Digits : yea, and the Moon shall be Eclipsed by the Interposition of the shadow of the Earth soon after it; and that which makes all this still more Marvelous, is, these three admirable Conjunctions (of the two superior Planets, of the swo great Luminaries, and on the Moon with the Earths shadow) shall be all almost in Direct Opposition

one to another.

All these prodigious Providences, thus admirably concurring at one Juncture of time, do found a loud ALARM to us, to ponder both the Premifes and the Consequences in our Minds, until they have a kindly Influence upon our Affections: To omit the Planets Conjunction upon which I am after fo Copious, the Theme I here Handle is the Eclipses, which puts the World upon a Gaze: The Prophet foel in the old Testament, and our Lord Christ in the new, foretold of strange and stupendious Eclipses should be fore-runners of the Lords coming. foel 2. 31. Mat. 24. 29, Oc. Yea, both the Gospels and the Epilles in the Holy Scripture do foreshew that there will be prodigious events and appearances both in the Heavens, on the Earth and in the Sea. Luke 21. 25. and that the whole frame of the universe shall shake and tremble, &c. as Houses, when ready to Fall, give some great Cracks to fore fignify it. 2 Pet. 3. 10. 6c. That Eclipse of the Sun at Christs Death, Math. 27. 45. was certainly fupernatural. For (1.) It was at Full Moon upon the fourteenth day of the Moons Age at the Pass-over, whereas natural and ordinary Eclipses of the Sun are always at New Moon in Conjunction with it and not in Oppo-2. That Darkness by a Total Eclipse, continued [im moon The you over all the Earth from the fixth hour to the ninth : which could not be natural, for the Body of the Sun being bigger than the Body of the Moon, doth foon wade from under its shadow, and never continueth totally darkned for one hour much less for three. (3.) That Eclipse was univerfal, which no natural can be, being always particular to those Provinces which have the nighest propinquity to the Cone of that shadow : whereas this was not in Indea onely (as Origen miltakes) but Tiberim ('tis faid) was fensible of it at Rome, and Dionysius Writes to Policarp, That they had this Darkness in Agypt, and he was so astonish'd at this Complication of many Miracles in one, That he cryed out [Nature patitur Dem aut natura periclum either Nature now determineth, or the God of Nature now Suffereth. This dreadfdl Eclipse happened under the fift Climacterical Con-

r

0

0

Conjunction of the two same Superior Planets since the Creation, wherein the Sun hid his Head (as it were) in a black Mantle, as assamed to behold those shameless Indignities done to the Sun of Righteonsness (Mal.4.2.)

by the Sons of Men.

The next formidable Eclipse we read of in History, is under the fixt Great Conjunction of Saturn and Jupiter, 800 years after this, upon the approaching Death of that samous Emperor Charles the Great, who dyed on the fift of the Kalends of February 814. Whereof Eginardus, writing that Emperours Life, saith thus Signa multa pracesserum mortem glories is Santti Imper. Caroli, nam Eclipsis solie Con Luna; ultra solitum suit. Apparuit per septem Dies macula Nigri Coloris in sole. Many strange Prodigies did preceed this Great Charles's Death, as Eclipses extraordinary both of the Sun and of the Moon, and a great black Spot was beheld in the Sun sor seven days; which could not be Mercury (as some said) because of his swift Motion; nor could it be a Meteor (as others assirm'd) because that is too high a place for these Exhalations, according to the known Rules of Phylosophy. It must therefore be [Digitus Dei] the Finger of God, pointing at that great Providence, which removed the To narriver or impediment which had thitherto hindred the surther and suller

Revelation of the Man of Sin.

All Artifts have held Eclipses to be the most precious Treasure of Affrology and Chronology, giving the certain and indubitable Characters of Time, as also that they have an irrefitible Influence upon Countries, Cities and Inhabitants that lay under the Line of them, Thus mighty remarks have been upon them in all Ages, both before and after Christ. As (1.) Placarch: Varro and Diomfine observe, that there was an Eclipse of the Jun at Romains's Birth, who was the fust founder of Rome in the year of the World 3180. and Cicero fays, There was another Eeliple of the Sun at Rome w's Death in the year of the World 3235. and may not we hope, that these Eclipses now may Prognosticate, that God will Reckon with Rome, and Eclipse her Glory, that the Vials of Gods Wrath shall be shortly poured down upon her, for her so long filling the Church with Herefy, all States with Blood, evil Men with Plots, Treaches ry and Treasons, but good Men with a due sense of the many Holy Cheats, of that ill Infalible Chair. I omit those Eclipses that Fore-ran Xerxes: over-running Greece in the year 3469. mentioned by Herodotus : that which portended the Peloponnesian Warr, recited by Xenophon and Thusydides; That of Great Alexander routing Darius, Oc. and that of. the Fall of Julius Cafar, and many other portentous ones,

(2.) All along fince Chrift, great remarks have attended them, as befides that afore-mention'd in the 8th Century, before great Charles his Fall: in the 11th Century so great an Eolipse of the Sun hapned at Noon, that the very Stars were seen in the Heavens, and then did the Sun of the glorious Gospel set at Noon upon the poor Waldenses, who were universally Massacred by the cruel Croisadoes of the Roman Beast. Yet God reserved an Holy Remnant for Royal Use: but the sethat fall out near Climasterical Conjunctions (as is afore hinted) are most formidable, as was that in 1652, which wanted not its direful Consequences and Consustances.

(3.) The Inhabitants of China (who think themselves to have two Eyes, but other people of the World to have but one) are much affrighted with Eclipses. Looking upon the Sun and Moon, as Man and Wife, and that

they are angry with them under thefe Deliquiums. O'c.

(4) However tis the Threatning of an angry God, that the Sun shall be turned into Darkness, and the Moon into Blond, Joel 2. 31. Mat. 24,35. A Solar Eclipse especially towards its Declension (as this is about three a Clock in the Asternbon) portends Declensions to fall somewhere, and more especially being attended with a Lunar Deliquium, so soon after, &c. but most especially, when it ushers in two Conjunctions of the two superior Planets, the one in this Month of January, and the other in May sollowing, (both in Leo) this year 83, a year, which Mr. Gadbury thought (in his Pradiction on 78) would produce strange effects, &c. Theartily Pray, that this Declemson may fall upon Rome and all its proud Helpers, and that this bright Sun of Righteousness may not fet at Noon upon our Heads, as Amos 8, 9, and our Land be not Darkned in a clear Day: Pray earnestly—Nobiscam, Christe, Maneto.

- Extingui lucem non patiare Tuam.

Are we not upon the very Tropicks and turning points of Time, &c., The effects of the Retrograde Motion of these two Planets were directly in the 8.6 Century, and they have been no less already in this 16th. God grant better, &c.

With Rechmenth Rome, and Edipie her view, there e Ville of Gors Wrath thall be floorly poored down to on her, for her follow, integrible Charch with Herefy, all Strates well-Rood, evel Men with Plets, Treacher ty and Treatous, but good Men with a lace think of the more Hole Charts of the cill Induced Court. I omit took the for the floor form the Chart which perfectled the Pelanger was 340, mentioned by Northwand Time which perfectled the Pelanger want Time the Chart of Green Alexander routing Divine, O'c. and that of

the hall of fulling [19] and many other portentous ones.

(2.) All alone lince Christ, great remarks have near tell thems as in addes that afore-a enton'd in the 8th Goranes, belong course for the state of the second second of the second second second of the second second of the second second second of the second se

An Astrological and Theological Discourse upon this Great Conjunction, and upon the Heavens, the Planets and fixed Stars; So far as is necessary to Unfold its Mystery.

đ

S this great, if not greatest & Climasterical Conjunction is Vsherd into the World by a great Blazing Comer, fo is this Difcourfe upon the Former by my Half-sheet upon the Latter; which falling into the Hands of a very Learned and Honourable Gentleman. not only found most pleasing Acceptance (notwithstanding the Notorious Omissions in it by its negligent Printer, who lest out two lines in two places of the First page, and another most material One in the Second, to wit? the Third und r Mofes, the Fourth under Solomon, the Fifth under . brift; fo he curtaild my Copy, if not made it Non-tenfe.) But alfoir brought forth a Request from Him to me for an Inlargement upon this great Conjunction: Touching the Comet (which was the Usher to this Conjunction) I observed, It quite left its Northern Latitude (where it first Appear'd) and is passed to the Southern, posting away from Urla Major, by Arthurus to a little beyond the Aguinoctial line, where it hath overtaken the Beams of the Sun, and wherein it hath hid it felf from our Sight, for the prefent. But may (If its matter be not all spent before) be seen again in the Morning (when it hath out run the Sun) fo come neerer to its Signal Lord and Mafter (the Superior Planets conformed) to which as an Harbingger and Herald it hath fent out General Summons to look up and admire: Leaving therefore the Servant (the Comet) who hath now Left is, having done its Errand) and we have Loft it by its Disappearance, ler us attend upon its Mafter (the Conjunction) which it attended upon, and hath founded its Trumpet (both North and South) to Rouze up Spectators of this fo wonderful position of the Planets, the like whereof hath not been for Twenty or Two Hundred or Eight Hund ed Years past, as the Sequel doth demonstrate in following R. marks the (Ift. Remarkis, Heaven (according to Scripture notion, omitting the diffinct orbs found out by Philosophy) is a fold Calum expinsum fellatum & gloriofum. (1) the Firmament wherein the Fowls do five, which is the Avrial Haven, and hence, 'tis faid [the Fowls of Heaven] Math. 6. 26. (2) the Esherial or Sydetial Heaven, wherein the San, Moon and Stars are feated and do thine forth, hence are they call'd the Stars of Heaven Gen. 22. 17. Dent. 1. 10.8c.13)the Empireal of glorious Heaven the apperm of of ali, the Seat of the Bloffed into which the Apoltle had his Rapture. 2. Co. 12.2.

A 2

where

where glorifi d Saints, and glorious Angels dwell with the great God, hence its laid, the Angels of Heaven. Math. 24, 36. its hard to open fo much as a Window or Casement for letting men see the Incomprehensible light of that glorious Lodging, which is the Palace Royal of the Almish of bounds, the Chief City and Court of the great King of Kings: Omitting this and the first. The Second is the Subject of our present Discourse.

The flarry Heaven is but the Floor and Povement of the glorious Palace, though it be a Roof and Canopy over us; 'tis (as it were) the [panel d Cartain of the Bride-grooms Chamber, the glorious and glittering Ron b caft, the Under ceiling, or (at least) the Utmost Court of the Coelestial Palace. The Great Creator hath shew'd much Skill, and laid out great Workman-ship upon Heaven, a most curious, accurate and elaborate Work, therefore is it call'd the Work of Gods. Fingers, Ifal. 8 3. (a Metaphor from Embroid rers and workers of Tapeftry, choice Need'e work, or Watch work, they must have nimble Fingers that work fuch fine Works with Expedition and Exactneis) and therefore is the Maker of Heaven call'd [lexvilns] an exact Artift (as the word fignifies) Hebr. II. 10. and not only [ipadins] a. Work man or Labourer, whose courser Work requires more the Strength of his whole Hand, than the Skill and Activity of his Fingers: The Great God Erected this most Immense Calestial Vault without any Ladders, Scaffolds, Tools or Engines, and when He had fo done, He Garnish'd it with Stars (as a Palace is adorned with stately Pictures.) Job. 26. 13. If the Outside and Underceiling of Heaven be foglorious, how much more is the Infide unconceivably fo. Ifa. 64. 4. I. Cor. 2.9. Pfal. 31. 19. John the Divine (in an extafie of the Spirit) maketh fearch through all the Bowels of the Earth and Sea to find out all the precious Treasures hid in Both, as Gold, Pearls and. precious Stones of all Sorts, and all this is done only to be a Dim shadow of Heavens excellency, Revel. 21. 11. to 21. Yea to refemble the Glory of the new fernfalem in the last times as to her Walls, Windows, Gates, and the Pavement of her Streets upon which no dirty Dog shall ever trample. Ifa. 54. 11. 12. Revel. 21.27. and 22. 15. When Mofes and the Elders got but a glimps of Gods Glory, they faw under the Feet of the God of Ifrael as it were the paved Work of a Saphir-Stone. Exod. 24. 10. Goddwells in inaccessible Light. 1. Tim. 6. 16. Mofes could only fee the Back-parts of that Glory. Exod. 33. 23. Yea fuch is that furpaffing Splendor, that the very Angels cover their Faces with both their Wings as with a double Scarff (just as men clap their. Hands upon their Eyes, when the Lightning flashes in their Faces) Ifa. 6.2,

The

The (1d) Remark is, the Stars in the starry Heaven are Numberless and many of them Namel's: Psal. 147. 4. God can both Name
and Number them, which is an Exclusive Expression, intimating God
only, but no Man can do it. Augustin tells of Aratus and Endoxus
who vainly vaunted, that they could both Name and Number them.
De civit. Dei lib. 16. But a better Man than either of them, Abrabam, one who was (as the Rabbins say) a great Astronomer could
never count the Number of them, as God saith to him Is thou be able &c. I Gen. 15. 5. Implying it an Impossibility to do it. Yea
Adam himself (in his State of Innocency) could give Names to all
the Beasts of the Field and to all the Fowls of the Aire, Gen. 2. 16. But
not a word do we read of his giving Names to the Stars of Heaven:
God saith expressly the Host of Heaven cannot be Numbred. Jer. 33. 22.
Hereupon Man is forced to call a whole House of Stars all by one
Name, such a Constellation, containing each a Bundle of Stars.

The (3d) Remark is, as the Stars are to be admired for their being above Name and Number, so likewise no less admirable is both their Station and Motion: The Great God hath fet a Tabernacle in the Heavens for all those Nameless and Numberless Stars as well as for the Sun Pfal. 19. 4. c. Each individual Star hath its diffinct and particular Station, (as every great Cart-nail hath its proper place round about the Ring or Rimm of the Cart-wheel) where it remains unmoveable, every Star hath kept its Station ever fince the Creation to this Day, not one particular Star hath left its peculiar Place for almost 6000 Years: Though some Angels left their first Habitation. Jude v. 6. Yet never did any one Star for fake its own Tabernacle wherein its Creator at first placed it. Indeed Metaphorical Lucifer did fall from Heaven I'a, 14. 12. But the Literal and Real one (to witt, that call'd Venus, the Morning and Evening flar) never yet did fo: The Stars are call'd the Hoft of Heaven. Jer. 33.22. They are Gods Army, that have their Stands and Stations, they all Stand in Battalia by the Appointment of their Maker, and Master, Jehovah is their Chief Lord General, who hath fet them in Rank and File by an Ordinance of Heaven. Jer. 31.35. &c. No Star ever yet brake its Rank from the Foundation of the World: Yet this Coeleftial Hoft or Army hath not only its Stand and Station, but also its March and Motion, yea (which is the more marvellous) they both Keep their Station, and hold their Motion at one and the same point of Time: Their Station is certain and peculiar though their Motion be constant, and perpetual: This may be exemplyfied by a familiar Instance, every Cart-nail in the Tire of the Wheel, keeps its place where it is fixed, while the Wheel runneth its Round, and makes a progress;

Tis not the Nail, but the Wheel that makes the Circular Motion. no more is it the Star that moves, but the Orb or Sphere (wherein it is fixed) which carrys about the Star (as the Wheel the Nail) in its continual Circulation: Thus likewife 'tis further demonstrated by a well-disciplin'd Army, every Soldier not only keeps to his own Colours, but also marches orderly in his place (whether a left Hand or a right Hand Man ; to his Rendezvouz, he duly observing his Generals Order both for his Station where, and his Motion whether at one and the same Time: And no doubt but Gods Host of Heaven is a well disciplin'd Army, every Star in Heaven is under a Law and Ordinance made by the God of Heaven, God asks fob [knowest thou the Ord nances of Heaven:] Job. 38 33. Canst thou tell bow to order the whole Hoft of Heaven? (as Mafter and Governor over them) or canst toos suide or direct) the Motion of (that fingle Constellation) Arthurus and bis Sons, ver. 32. which ever whirleth Round about the Northern pole, but never goes down the Horizon, 'tis the work of God alone to order every Star in its Course, Yea, to make the matter still more admired, this motion of the Stars is made either without wandring or weariness Ist. without wandring All the fixed Stars do con-Stantly keep their way, and their time as well as Place and Station) in both their Nocturnal and Diurnal Motion: (1) they do hold their way (wherein their Maker hath confined them) with so much exactness, that they have no Epicycles (as the Planets have) nor any Eccentrick Motions, but fulfil their Circles and Revolutions without the least Deviation: Hence it is observed, that those Inhabitants (directly under the requinoctial) have a prospect of all and every Star equally for 12. Hours above the Horizon) for there the Sphere is Direct, but where it is oblique, some Stars rise together, yet do not fer together, yet none vary an Hairs-breadth from their appointed Lines of Circumference: Neither (2) do they vary the time (ap. pointed them) but do precisely observe it even to a Minute, hereupon the Plalmift celebrates God's Praile : For the outgoings of the Morning and Evening. Pfal. 65. 8. for the exact Vicillitude of Day and Night, and the admirable Equipage the Host of Heaven marcheth in according to the Ordinances of Heaven from the Lord of Hofts. Jer. 31. 35. The Sun, Moon and Stars know and observe precisely their time both of going down and of rifing up. Pfal. 104. 19. 20. which all the Powers of Hell and Potontates on Earth can neither Hinder nor Haften Job. 58. 12. Pial. 74. 16.17. Yea io exact and regular is their Mation, that Men (who knows not where themselves shall be, or what hall befall them to Morrow. Prov. 27. 1.) can write Ephemerides what Ecliples will be for many Years to come, in what point of Heaven and what Hour of Day or Night, fuch and fuch Politions, Conjunctions, Oppositions &c. will happen, yea not only when the Sun will rife and fet all the Round Year, but alfo, that the Tail Star of the Great Bear will early and late point directly to Ardurns, that Arthurus shall rife exactly when the Sun fets upon the 10th. of March: and that the great Star of the Lyon and of the Great Dog, though they rife together, yet the Dog Star will fet some Hours before Cor Leonis, because their Sphere is oblique (as to us) this latter being neerer to the Tropick of Cancer, as the former is to that of Capricorn: these and many more Instances (not mentioned) may demonstrate how they all exactly observe their time and way without wandring. Yea and (2dly.) All this the Stars do Without weariness also. In an Host of men on Earth, some Soldiers will be found both wandring and wear) : But in this Hoft of Heaven (fo called) As none are found wandring (in fano fensu.) So nor can we find one Star, that may be reputed weary: The Prophet compares God to a Chief Commander calling forth his Companies (the Hoft of Heaven, all in his Muster-Roll, and laying his Commands upon them. though fome Soldiers may fail in their March either through Fear or Feebleness (as that Esprian did. 1. Sam. 30. 11. 12. 13.) but not fo much as one Star ever failed. Ifa. 40. 26. though their March be many Millions of Miles round the Circumference, and that without Rest and Respit Night or Day, Yea and now for almost 6000 Years. But one Instance (for brevity) to wit, that afore mentioned. 'Tis a Matter of of great Admiration, that Canis Major and Cor Leonis (among the fixed Stars) should Run a Race Round about the Globe of the Earth (which, the Hebrews fay, is distant from Heaven a 500. Years Journey) rise together at their first Creation in one point of time. yet though they have been Running their restless Course, for neer 6000 Years now, neither of them hath fainted or failed in the way, so as at any time to ourrun each other, but still both of those Great Stars observe a precise point of time for their Rising together now, as they did at their first setting forth, yea and of setting together to those under the Aguinostial, though not so to us through the obliquity of their Circle and Circumference in our Horrizon: The same may be faid of the other Stars.

The (4th.) Remark is, that the Great God hath created not only Innumerable and Innumerable Stars,, that are fixed in the 8th. Sphere (call'd the Starry H. aven) but also seven Planets, or wandring Stars (as the word Flanet fignifies) so called, not and simply, but related Secundum quid, or Comparatively: If those Planets be Simply and by themselves considered, they have made their several Revolutions

(in their own diffinct Orbs fat the most fixed and most unchangeable certain Periods from the Beginning of the World to this pre ent day: but to speak comparatively (in Respect of the fixed Stars) all these Hances are placed under them, have a differing Motion from them. and hold an unequal distance to them, yea and one to another in Respect of their (seeming) Vazabond and Eccentrick Motion, they have various Longitudes, Latitudes, Conjunctions, Oppositions, Sextile, Square and Trine Afp. Ets. Sometimes they move more (wiftly, sometimes more flowly, as they are higher or lower in their Epicycles, fometimes Retrograde, & Direct, or Stationary, never keeping the same diffance among themselves; or to any of the fixed Stars, nor holding one and the same Situation in the Firmament as the fixed do: Notwithstanding all this, no Stars wander less than they do, but have a most certain, constant, stated, and regular Motion; Duely performing the precise points and periods of their compass in their appointed Times: As the Sun knows his going down. Pfal. 104. 19. So do all the other fix Planers comprehended in one Ver e, Poft Sim Sum] Sequitur, proxima [Luna] subest : Wherein [S] is Saturn []] Pupiter [M] Mars. The next [S] is Sol the Sun, [V] Venus and [M] Mercury with Luna the Moon. All thefe 7 are call'd wandring Stars for the Reasons above named, and this Denomination hath a Divine warrant from the Apostle Jude v. 13. where wandring Stars are mentioned: [A'sepes mann] in the sense only of the common Judgment of Sense which beholds them carryed about in a differing Course to the whole Circuit of Heaven beside: Two of those 7. Planets are these 2. Great Luminaries or Lights of the World, the Sun and Moon both which be a whole Bundle of Wonders. The Sun is the Prince of Planets, yet (as his Hebrew Name[Shemesh] Signifies) is a S. rvant to Gods Servants: He cometh out of his Chamber as a Bridegroom (with marvellous Splendor, Pomp and Bravery, when he first sheweth himfelf above our Horizon) and Rejoyeeth as a Champion to Run his Race. Pfal. 19. 4 5. This he Runs with fuch a wonderful Swiftness, as exceedeth the Eagles Flight, more than the Eagle exceeds the flow Motion of the Snail (Bellarmine faith, the Sun runneth seven Thoufand Miles in the Eight part of an Hour. Bell. de Afcens. Mentis in Doum grad. 7.) and with fuch Incomparable Sweeting's Ecclef 11.7. that Endoxus the Philosopher profess'd his Willinghess to be burnt up. presently by the Sun, so he might be but admitted to come so near it, as to learn the admirable Nature of it, and Chryfostom cannot but. wonder at the Suns darting down its Rayes towards the Earth, whereas all Fire shooteth and hasteth up toward Heaven. I might mention many more Marvels in the Sun, were it not befides my present Defign

Defign. As likewise in the other Great Light, the Moon, cal'd Hebr-Pareach of Ranach to Refresh or Refrigerate, because she cools the Earth with her Influences: and Moles mentioneth, that as the Sun by warmth, fo the Moon by Moysture, make the Earth fruitful Den. 33. 14. as some will needs place Hell in the Hollow of the Sun, so others conceit a World in the Moon, the Thinner part to be the Sea, and the Thicker, (which is easy to discern, not all alike lightsom) to be the Earth: However no Planet hath fuch Changeable Afpects, yet Astronomers Affirm, the hath as much light in her Wane as in her Full, only her bright fide is turned toward Heaven: Hence Dr. Hackwel hath an Excellent Note, that therefore God feem'd to fet Her lowest in the Heavens and neerest to the Earth (of all the 7. Planets) to put us daily in mind of the Constancy in Heavenly, and Inconstancy of Earthly things, Her self (in some sort) partaking of both, though in a Different manner, of the one in her Substance, and of the other in her Vifage: to fay nothing of the Ecclipses which are the wonders of the World, and which Metamorphose (even) the very Haters of Astrology to become stark-staring Star-Gazers: to say but little of the two Planets next above the Moon, vet under the Sun to wit, Venus and Mercury, both which do attend alway upon the Sun, as Courtiers do upon the King, never going far from Him, Venus never more than 48 degrees and Mcrcary but 30, which is the Reason, why it is so seldom feen, and why both have no other Afpect to the Sun but Conjunction, whereas the other Planets have oppositions &c. The Morning Star (commonly call'd Venus fot its Beauty and Bravery) is the confrant Companion of the Sun, and next in bigness (as to Appearance) to the two Great Lights casting a shadow as the Mon, 't.s feen long upon the Day, and is not darken'd by the Moon in the Night, Sed ipfins Contactu fit lucidior Aureo colore in Candorem diffuso. The neer Approach of the Moon Changes only its golden Complexion into a more splendid brightness. These two (in a word) (Venus and Mercury) are call'd Homodromi, that is, Fellow Runners because They Run almost in the same course together, and fulfills their periods not far asunder, never much Remote from the Pallac: Ro, al or Prefence. Chamber of the Sun their King, which is also the Reason, why these two never have Ortum & Occasum Cosmicum, they do not Rife. and fer with the Sun in that part or point of Heaven &c. which is opposite. Both keep nigh the Sun sometimes going before it, and sometimes following After.

But (omitting the Inferior) my main concern at present is the Supersor Planets, under which the Sun is easted as the Center of all the Stars and the Eye of the World. God hath placed it, in the midt of

the Orbs, that it might the more commodiously give light (It felf being the fountain thereof) to both the Superiour and Inferiour Stars. and that neither by its propinguity (If in the Moons Orb) it should forch the Earth, nor by its too much Diffance (in the 716 or Saturns Sphere) Sublunary things should be starved through want of warmth from it. The Sun is feated in the midft of Heaven (3 Planets above. 3 below him) as a King in the midst of his Kingdom, that He may Diffu'e his Influence on every hand, and Keep all fides down in an equal poize and posture (as Plutarch faith) by his middle presence: The Planet (commonly call'd for Distinction-fake; Saturn, is the Highest above the Sun, and next below the Starry Heaven or Sphere of the fixed Stars, appearing of a dusky colour, as a Star of the Se. cond magnitude, cold, dry and Melancholick, and (having the Higheft and Wideft Circumference cannot complete his Circuit under the space of Thirty years. Therefore 'tis said to be of a flow Motion in his peculiar Cycle, to fay nothing of his Epicycle or Eccentrick Motion: That, call'd supiter is the next to Saturn exceeding splendid (so that tis oft mistaken by the Unskilful, for the Morning Star, or for the great Dog Star, appearing as a Star of the first Magnitude, that may Ecclipse Saturn, when their latitude (which feldom Happens) be Equal at their Conjunction. This Planet Accomplisheth his Zodaical period in the space of twelve years. Having a narrower Sphere than Saturn, yet a five times bigger body, so that no Planet but the Sun is greater than it, being 95. times (Cardana faith a 100 times) bigger than the whole Earth.

The third Planet is call'd Mars, less than Impiter, Higher Colour'd than Saturn, of a Red, Fiery, Cholerick Complexion, who (still in a narrower Circle) Finisheth his Revolution in two years Time: The Wildom of our and Their Creator may be much wonder'd at here in two Respects (to mention no more now of the many Besides) that (i) Saturn, which cooleth much, and Mars, which Heateth much should have Jupiter placed betwixt them that it might temper and qualify those two Extreams with its more moderate, Temperate, and Benign Beams: (2) that there should be such a Concreated Harmony betwixt the Sun and those 3. Superior Planets (as is aforesaid) That Supreme law which their maker laid, and left upon those 3. was, that they should observe a constant Congruity in all their Eccentrick Motions with the Sun, whom they feem (faith Alfted) to Reverence as their King, This Divine Command They have kept (to the shame of us who frequently transgress that Law laid on us in Disomning, Dishonoring and Difebeying Christ our King) for almost 6000 years, for as oft as they are in Conjunction, so oft do they betake themselves to the top

of

of their Epicycles as to their Chappel or closet, in Reverence (as it were) of lo Royal a Guelts presence, they Depart into the utmost borders of their own Dominions, they give place to their Approaching King, stands off at a due Destance and there Receives (as it were)commands and Influences from him: And then, when (After the Conjunction) the Sun (whose Motion is swifter) withdraws from thence, these Planets do Descend from the Top or Tower of their Epicycle and (like officious Courtiers) Attend upon their Prince going his Progress, and so they follow the Sun (their Lord) so far, as till he is gone off through the third part of the Zodiack, till (by his quicker speed) He hath out-run them the space of four (of the Twelve) signs. Then, at length, as if they had fully Discharged their Duty and Homage, they make a stand (call'd at that time Stationary) for some Days, casting (as it were) their long looks after him, and at that diffance they throw him a Farewel: When this is done, They begin their Retrograde Motion, Running back into the bottom of their Epicycle, and letting themselves down into the lowest part thereof (as oft as the Sun is gone from them into the opposite part of the Heavens to them) and therefore (as Alfred excellently observeth) they seem to bewail the abfence of their King, and (as it were) Humbly Request his Return: After this, when they Discern the Sun drawing off from his opposition to them, and Returning towards them again, then they, Ascending from the bottom, the place of their bewailing (still contrary to the order of the Signs) Haiten out to meet their King, and (as with some Salutations) they Emertain the Sun, while He is yet diftant from them the space of a Trigon (3 or 4 Signs) by becoming Stationary, or making another stand again, this done, and the Sun Approaching fill nearer and nearer, They then Run before him (as bis joyful Heralds and Harbingers) in a right and Direct course according to the order of the Signs, and as with great Gladness glide up to the Top of their Tower again, that they might (as it were) relign up the neareft and most Commodious and Honorable place to the Sun their King: This in fhort is the constant Harmonious Motion of these 3 Superior Planets and the Sun. The Epiphonema cannot be less, than an Heart Refreshing Admiration, & a Soul-Ravishing Adoration of the most mighty and only. Wife Jehovah who Created and hath ordered thefe Aftonishing Stars &c. The works of the Lord are great, Sought out by all those that have pleasure therein Ps. 111.2. If all the works of God be great, those on the Earth and in the Sea, then much more those in the Heavens, no less than great works can fall from the hand of so Great a God, they are all Magnalia, so should all be mainified, not neglected or flighted: It should be a pleasure to us (as it hath been

no little to me) to search and find out such wonderfull works, Though they be Great, yet are they to be seriously sought into, and sound out by those that Delight therein, and the deeper they dive into them (not for vain Curiosty, but from solid Santhy) the sweeter they find them: God hath shewn singular Skill in all (Esp. in these) his works, and He will have Men to admire him their Maker. They all (acentro ad Calum) are Tip'd and Guilt with a Glory upon them, this the Brutish Man understands not Ps. 92. 5. 6. Neither his ordinary nor extraordinary Handy work, whereas a woe is Denounc'd upon those that Regard them not Isa. 5.12.15 Ps. 28 4.5. They shall have like for like &c. God will Reward them according to the work of their hands, because they

Regard not the work of Gods Hands.

The (5th.) Remark to omit the Conjunctions of the Inferior Planets. (because the frequency thereof darkens the Significancy) beside their Inferiority) the Superior only are here to be handled and the other but Obiter (as occasion offereth) and Mars alfo, though it carrys a correspondency with Saturn and Jupiter in the Quality of their Motions (both as to Longitude and as to Laittude) these three differ only in the Quantity thereof: Mars fulfills his Cycle far fooner than the other, fo its Motion hath not fo many Remarks upon it, Saturn and Appiter have many Aspects, both towards the other Planets and one towards another, as Sextil, Trine, Square, Opposition and Conjunction, waving all the other four, I shall insist upon the Last named: Their Conjunction must needs of all their other Aspects, be must Remarkable feeing then and therein only, those two mightyest Planets (as it were) twist together their most powerful Beams, this they do, when they come near each, as do the Sun and the great Dog-star from the 20th, of July to the 27th. of August, all which are call'd Dog-days from the Hot season produced by the twisted Rays both of Soland Sirius: Indeed in true Propriety of Speech, a Close Conjunction cannot be call'd an Alpett, for when they have no distance wherein to look one upon another, but are in the fame Degree and Minute of a Sign together; Thus may it sometime come to pas, that fupiter may totally Ecclips Saturn, as being both in a lower Orb, (& coming twixt us and it) and of a larger Body, seeing Saturn is but as a Star of the 2d. Magnitude, whereas Jupiter as one of the first : Mr. Wing (in his Aftron Britannica pag. 1280. writeth, that in the Year 1661. May the 3d. at 11. in the Night, he faw Sarurn totally Ecclips'd by the Moon, which is a far leffer Body than it, though it feem greater through its nearness to us, and the others great Difrance from us: That these two Superior Plinets (as also Mars) should be sometimes Direct (going strait forward) sometimes Retrograd

grade (stepping backward) in their Motions, and sometimes Stationary (flanding, as we fay flock-flill) while all the other Stars (call'd fixed.) never do fo, must needs be very marvellous; ver their firange Conjunctions one with another is far more a greater marvel, their Comunction is Threefold, 1. Minima. 2. Media. 3. Maxima. or (as Artifts phrase them) 1. Specialis, 2. Trigonalis, 3. Climacterica. Thele 3. feveral forts of Conjunctions in the two Superior Planets are capfed thus, (I.) Saturn is of flowest Motion (as he is the highest Planet, and hath the largest Circle to run, seldom above 3. or 4. Minutes in a day, his mean Motion is (as some say) 2. Minutes and 11. Seconds, his swiften Motion is but 6. Minutes: And if his Diurnal Motion be fo flow, his Annual must be accordingly, which (according to Keplers Tables improved by Maginus) is computed not above 12. Degrees in 12. Months. The flowness of Saturns Motion is further illustrated by his feveral Postures, Retrograde, Direct and Stationary. He stands still (neither moving backward nor forward) for 3 or 4. (some say) five Days before he move backward, or contrary to the Order and Succession of the 12. Signs, and as many days, before he go direct forward, that is, from one Degree of the fign to two, and fo on to the rest, in which direct Posture the Sun and Moon, are always found, marching indways, and never are Stationary (as the other Five Planets be) or Retrograde, but by a Miracle as they both Rood, still in Joshuahs time, and the Sun went back to Degrees in that of Ahaz: Beside, Saturns Retro radation continueth customarily (as some compute it) an 140. Dayes, all which considered, must constitute his Motion Annually to be very slow: (2.) Jupiter hath a fmarter Motion, finishing his Revolution in about 12. Years, whereas Saturn doth require about 30. Years wherein to finish his Cycle. Yet Inpiters Motion (compar'd with that of all the other Planets) is very flow also, whose swiftest Diurnal Motion is but about 14. Minutes (as Salurns, at the most, is but 7. and Mars but 31.) befide bis being (as well as Saturn) Stationary five Days before he be Retrograde, four Days before he go Direct, and his Retrogradation lafteth 120. Days. So that he likewise is of a flow Motion: Hence it comes to pass, that there 2. Planets do seldom make Application each to other in their diffinct Spherical Motions, they feldom meet together in Coniunction, and they may meet together fometimes with their Beams when they do not exactly with their Bodies. The first fort of those three Conjunctions the 2. Superior Planets make, is call'd the Leaft, Meanest or Special, which falls out only once in about 20. Years. reckoning in the round Number all along, and not troubling either my felf or the Reader with the Fractions or broken Numbers: This

may

may be thus explained: Suppose Saturn and Inpiter do start and begin their Courte in the Sign Aries (the first chief, and cardinal Sign of all the 12, in the Zodiack) Supiter must run through all the 12. Signs, before Saturn can run through 4. of them, therefore (through this Inequality and Disproportion of these 2. Planets distinct Motion) before Jupiter can overtake Saturn, the Space of about 20. Years is required, that is the Time, whereat these 2. Planets do concur always in some one of the 12 Signs, and in some one Degree, and Minute thereof. This is call'd Conjunctio Minima: Their (2d) fort of Conjunctions is the Mean or M ddle, for understanding this, we must suppose, the 12. Signs are divided into 4. Trigons, Triplicities, or Triangularities, the Fiery, Earthy, Acry, and watery Trigon; Aries, Leo, and Sagittary make the first, Taurus, Virgo and Capricorn, the Second, Gemini, Libra and Aquarius, the third, Cancer, Scorpio, and Pifces make the fourth; ow Saturn and Inp.ter, having made to Conjunctions (as Modern Aftronomers reckon them, though the Antiens. fay 12. but of that after) in some one of those four Trigons, they then go off from that Triplicity, to make fo many Meetings or Conjunctions (be it 10. or 12.) in the next Trigon, as out of the fiery Triangularity into the Earthy &c. These many Meetings in each Trigon (before they can go through all the 3. Signs thereof) require the Space of 198. Years and 265. or (according to Alfted) 236. days &c. by the Modern computation of making only 10. Meetings, but if 12. (after the Antients) be taken, then the measure of time will be, not only almost 200. (as is the former) but altogether 240. Years before the planetary Conjunctions have accomplish'd all their Revolutions in any one fingle Trigon, for which it is call'd the Trigonal or Mean Conjunction. Lastly the (3d.) Sort is the Great, Greatest most signal and cl matterical Conjunction which happeneth very rarely in the World, for as the first falleth our once and but once in every Twenty Years fuccessively, (as above) and as the second succeeds only in every two Hundred Years (which is the found Number, within little more than one Year above the Fractions) according to the Modern computation: So this third cannot fall out, till Satury and Jupiter have run out all their to (or 12.) Conjunctions in the First (the fiery) Trigon, all the same Number in the second the Earthy, all likewise in the Acry the third, and lastly all in the last which is the watery by an orderly Progress. When these two superior Planets have run through all these four Trigons in successive Order, and at last comes to have another Conjunction after their last leaving the watery, and at the very beginning of their first meeting in the fiery Trigon, this is the full period of their whole Cycle, which is a Revolution (as Kepler computes

putes it in the round Number) of 800. Years, by the Modern computation: But according to the Computation of the Antients, (who reckon not by 10. but by 12. the 20s. the Compass of Time then amounts to 960. Years betwixt one Total, chiefest and climacterical Conjunction(as this last is called, and another. Because this latter and antient account may ferve us as some Salvo in the Sequel, let it be obferved, that Men of great Name and Note, were of this Opinion: fuch as Haly Rodoan, Albumazar, Guido Bonatus, Abraham Avenaris, Alcabrius and many others, none contemptible in Affronomical Arr, perhaps it was (as'tis faid) their mistake for want of those exact Tables in those anrient Times, which our later Times (standing as Pigmees upon those Gyants shoulders so might see further than they) have found out by greater Art and Industry. And perhaps even these Later Tables are not found faultless, for Engl. prophetick Merlin finds fault with Origan, Kepler and Alfted in their computing those Great Conjunctions short both of Truth and Experience pag. 53. 54. concluding, that there is not any certain Rule can be made, whereby without (a right) Calculation the true Conjunction of Saturn and Jupiter may be found, for there will be Variation in Degrees, If no worfe Er-

rour bappen.

However this Third is the Great Comunition, which all Aftronomers (both Antient and Modern) have unanimously put the most Stress upon in their Learned observations, not only because these 2. Superiour Planets are (above all the other) most significant and efficacious, but also because this their climacterical Conjunction falleth out but once in almost every Thousand Year of the World: This new Consideration hath fo transported (that Phænix of his Age) Kepler and after him (that Universalist for all folid Learning) Alfted as jointly to fav, that the Great Conjunction of thefe 2. Planets in the Fiery Trigon did portend the Revolution of some new Empire. Alfred Thefaur. Chronolog. fol. 482, further faying, that the Force and Fire thereof would burn up and destroy all the Dregs and dirty Doings of Rome. but above all others is the Divine Rapture of the Noble Dane Ticho Brahe & Savudos O, who faith, It is worthy of our weightyeft Obiervation, that as all the former uneven Revolutions of the Fiery Trigon (namely the First, Third and Fifth) have ever been auspicious to the World, as having Viherd in some signal and singular Favors of the Almighty to Man-kind; so the Seventh Revolution is the Fore-runner of a more happy and glorious State, than all the former past Ages have ever yet enjoyed &c. Tycho Brabe Aftronom. Progymnasm: Tome the First, not far from the End, where that Atlas of the Mathematick Heaven divinely argues and inlarges uponit: This fame famous.

famous Tycho Brahe doth further fay, that the first (Exclusive) Revolution of the fiery Trigon (and by consequence the first climacherical Conjunction after the wordls Creation) happened under Enoch and under the (then) flourishing Estate of the Church as he calls it. The third he fixeth under Moses, and under the Deliverance of Ifrael from the Agretian flavery: The fifth (he places) under Chrift, and under the Restoration of faln Man into Gods favor by the Redeemers naision &r. And his own words follow thus [Septima hac. Trigonorum in integrum (ab orbe condito) Restitutio quandam Sabbatismi occultam Rationem obtinet, & pracateris peculiare, magnig; momenti aliquid denunciat. That is, the feventh Conjunction Climatterical, in the Compleat Return of the fiery Trigon from the Foundation of the World. brings along with it in its bolom a certain fecret Sabbatifm or State of Reft, and something in demonstrates which is peculiar above all the Rest of the fix Revolutions, and what is a matter of mighty moment. Thus Tycho Brahe, d. 1. and much more to the same effect. Neither is this Atlas of found Aftronomy (as Learned Authors call him) fingular in this Opinion, but profound Kepler went before him in the same Sentiments, and Acute Alfred follow'd after; this appears in his Encucloped. Page 1105. Where he concurs with Keplers Tables (Reputed the best in the World) which, he relates, to run thus: (Though the period of each Climatterical Conjunction be computed to be compleated in the Compass of Seven Hundred Ninety four Years, two Hundred and fourteen Days, yet (faith he) for these Fractions or broken Numbers, Kepler reckoneth by a round Number, so that the Grand Revolution must be reckoned by the Round Number of Eight Hundred Tears:] And he fets down Keplers Tables thus. The first great Conjunction (Exclusive) from the beginning of time was in the 800. Year of the World, which was three Thousand, two Hundred Years before Christ: The second was in the Year of the World 1600, which must be two Thousand four Hundred before Christ. The third did fall out in Anno Mundi 2400. which was one Thousand fix Hundred before Christ: The fourth falls in the 3200. year of the World, which must be before Christ Eight Hundred Years. The fifth was when Christ came in the Flesh to work the Worlds Redemption, which was in the four Thousand Year of the World. The fixt falls out in 800. years after Chrift, which was the four Thousand Eight Hundred year of the World: And the feventh (still multiplying by 8. from the first to this laft) must fall out in the fixteenth Century, 1600 Years after Christ at what time the World is five Thousand six Hundred Years old: AL Red adds further (in Page 1215.) that the Antients did measure Time by these Revolutions as by infallible Rules, as thus from the Creation

ation (1) to Arts, Cities and Robberies is 800. Years. (2) to the Universal Delage and the first Monarchy 1600. Years (3) to Abraham and his Seed going out of Azypt, 2400. (4) to the Destruction of the Kingdom of Israel and Judah, 3200. (5) to Christ and the Rise of the New Testament Church 4000. Years. (6) to the pressures of Christs Church 4800. (7) to the Church's Deliverance from those pressures by Antichrist &c. 5600. So that all these three most Eminent Authors did Vnanimously expect this seventh great Conjunction, or compleat Revolution of the Planets (which happeneth in this our sixteenth Century) that great and vniversal Changes would be the products thereof, seeing the Planets in this 7th. Revolution shall have run through their Circles, and then return to their sirst Beginnings again, which cannot but portend mighty things: This being supposed to be the last, sundry Astronomers questions, whether there ever will be any other af-

The (6th.) Remark is the pious Meditation of the Antients, that the Septemary or Seventh Number is a plenary, perfect and mystical Number, which (in Scripture) hath a peculiar fignification, 'tis compounded of 3 and 4. the Ternary or Three is the Number of God our Creator, who is one in Three and Three in one; the Quaternar; or Four is the Number of Man (the Creature) who is made up of the four Elements as are also all Sublunary things call'd Elementary compound Bodies; hence it is that all things have a wonderful Harmony of Conzerency and Rest in the Septenary Number; hereupon Philosophy calls it [Numerus primus, Virgineus, Sacer & Quietarius] (1) The first Number because it made up the first Week (2) The Virgin Number, because great is its force and efficacy (as a Virgin is in the Flower and Strength of Age, so every Seventh Year is computed Climatterical and Seven Nines (or 63.) is accounted the great one, as 7. Years (in Law) is the Term of a Mans life, and 3 Sevens are æquivalent to 3 Lives: (3) 'Iis call'd a Sacred Number because it flows from the Ternary, which is the Number of God, and the Quaternary, the Number of the World, as is above faid, this Note favors not fo much of Superstition as it Respects the Nature of Harmony; hence the Poets Phrase Perfedion of Prosperity by terg; quaterg; Beati] a 3 fold and a 4 fold Happineis: (4) Tis the Resting number because the Seventh Day and the Seventh Tear in facred Writ were Sabbatical: Every week is call'd Septimana, confifting of 7. Days, and every Seventh Year produceth some materia! Alteration: Beside, the Seventh Number is call'd the Limit and Measure of all Inferior numbers, and any great number proposed (whose Measure is Seven and may be divided by 7. exactly) can by no other Means be more certainly found out that

C

by Division with 7. But above all, the Holy Scriptures number all by Sevens, accounting, the 7th. Hour, Day, Month and Year to be all Sabbatical and the Seven Seventh Year to be a Inbilee, a Restitution of all &c. And this Harmony between Hours, Days, Months and Years feems to be intimated Revel. 9. 15. Thus also the Law required 7. washings or sprinklings of blood or water, and the 7. Lamps in the Inner Court or Holy Place, representing the 7. Planets in the Visible Heavens, as the greatest Lamp stood in the middle of the other fix, having 3. on either fide, fo the Sun is feated in the midft (as Prince of the Planets) having 3. above Him and 3. below Him, all attending him, as above: All the walks of this glorious Sun, are shadows of something within the Vail. The Eve or Evening was (as Eve was to Adam) the Wife of the Morning, the fews and other Nations reckon the Beginning of Time (as of the Sabbath) at Evening, and to them that are about the Æquator, and to all, at either Æquinox, the first 6. Hours brings the Sun to the Mid-night Nadir, or Mid-Heaven of the Antipodes, and fix more to the Morning Horizon, fix more to the Zenith or noon of the upper Hemisphere, & fix more to its setting again, when the Sun hath taken all these Turns of Sixes 6. times over then comes. the 7th. or Sabbath Day, whereon the Cakes of the Shew-bread were changed. I. Sam. 21.6. Every 7th. Hour (as well as every 7th. Day) made a Pauze or Rest the Sarbath of the Evening Ps. 104. 23. of the Midnight or the Morning, and of the Noon or Mid-day. Vinerd in by fix Hours, as the Sabb th is by fix days, and that 7th. is the first Number wherein Heaven and Earth met together (God and Man) in the first Sabbath worship: Numero Deus Impare Gaudet. 7. is an odd Number, and the 7th. Day was not only a Reffing, but a Refreshing day to God. Exod. 31.17. (would to God it were fo to us) above all the other 6. Days. And I know not why this 7th. Grand Revolution of those Planets may not bring in a blesed Sabbatism, or some Extraordinary Rest and Refreshment seeing [xapos avaougeus] a Time of Refreshing (or as the Gr. fignifies) of Cooling the Heat, is promised Act. 3. 19. and [xpor@ arroralasares] a Time of the Restitution of alithings v. 21. wherein all Ruines by Sin shall be Repaired by our Saviour, and Bleffed Jefus shall take off the Curse and Corruption under which the Creature groaneth, Rom. 8.19.20.21.22. This great Scripture Truth, Divine Plato Hammerd at in his Great Revolution. when, after many Thousands of Years (He saith) all things shall be again (in statu quo prims) as they were at the Worlds beginning in a ffate of perfection: The World waxeth worse and worse and the last (being but Dregs) are the worst of Times, yea not only the Earth but Heaven also grows faint and feeble through old Age. Insomuch that

that the Sun as Prolomy faith) Runs much ne aret the Earth many Thousand Miles now, than at the Creation: If so, then by the same Rule, the Planets must do the same, and then neither of them have kept their first perfection, from whence some Salvo's to arising Doubts may be deducted, if this Hypothelis should be taken for Granted: But whatever may be faid to Ptolomys Affertion, I shall endeavor to illustrate that of Noble Ticho Brabe, saving, that all the 6. Great Conjunctions which only have happened fince the Foundation of the World (Exclusive) to this 16. Century, have been Auspicious to the World, and Viherd in some fignal Mercies to Man-kind: So this 7th. in our Century will certainly exceed them all Ge. as the 6. Days Creation had (each of them) their Tob, Good, but the 7th. Days Rest was attended with Tob Meod, very good: So the & former Revolutions all brought Tob, good to the Church, but this 7th (suppos'd to be the last) will undoubtedly bring Tob Meod very good things with it. The Bridegroom at the Marriage feast reserves his Best Wine for

the Last Time. John 2. 9. 10.

Take a fhort Land-skip of all the former 6. The (first) under Enoch 800. Years of the World, his Name fignifies [Catechifed] as Gen. 14. 14. [Chanikan] Catechifed or Trained up in Religion as well as Warfare. He was taught of God to walk with God Gen. 5. 24. Hebr. 11.5. Ecclefiafticm 44. 16. and 49. 14. A great Type of Chrift in his Ascension living 365 Years before his Translation after a God. pleasing Life, and just so long did Christ live in the Purity of the Primitive Church to Julian the Apostate in the Year 365 after Christ. He was (as all the Patriarks were) the Chief Bishop of his Time, by whose Labours the Church of God was preserved in that prophane Age. He prophecyed of the Destruction of Sinners (before Noah did of the Deluge) foretelling the Day of Judgment and the Coming of our Lord. Syr. Maran-Atha (hence the Jews make him the Author of the great Excommunication) Jude v. 14. 15. As Enoth is call'd the 7th from Adam, the Church had fome Sabbath or 7th Time of Refr fling by him, a Reft and Respit from that Vniversal Destruction which came upon the World afterwards: Thus Elijah (Enochs Brother candidate of Immortality) is Stiled the 7th. from Adamalfo, not in Respect of Degrees or Gradual Descent (as was Enoch the 7th. Patriarch, not the 7th. Person) but by way of Computation, and in Respect of lo many Generations (as some Reckon) between them: Elijah is computed the 7th. Prophet from Adam and the first fent to the Gentiles, agreat Reviver of the Church (as his Brother Enoch was, and a Restorer of the Law. Now here be two [7ths. from Adam] both Translated in. to Heaven, which may intimate that after the 6000. Year of the 34 45, and World.

World; comes the 7th. from Adam or 7th. Millennium with its strange Translation likewise. However, this Translation of Enoch is call'd Annus Sabbaticus, Calvisus, Opus Chronolog. Page 3. Enoch predicts (as a lateReverend writer saith) fudicium matutinum the Morning part of the Judgment Day (explain'd Dan. 7.7.8.9) as if then to be seen [behold be cometh] which was not to be till the 7000. Year begin, and the Vespertinum or Evening part is after it, explained in Re-

vel. 20.7

The (Second) Climatterical Conjunction (by doubling the Number [8] here and all along) was in the 1600. Year of the World under Noah, in which Century the Universal Deluge destroy'd the wicked World, which was then drowned in wickedness before it was drown din water. Yet the Church had then her Annum Sabbaticum a compleat Year of Rest in Noabs Ark, for from November (when Noab had laid up all his Stores of the Earthly Fruits, and entred the Ark with his Beafts, Fowls and Family) he remained there till the Beginning of November following: As Enoch had been a Cooler to the Church, when the wicked world was Hot in wickedness, by his contrary Profession, prophecying, and Prattice, for which God took him up into Heaven as thinking no place good enough for him upon Earth) and whose Tranflation gave to the Church the first Specimen or Proof, that God had prepared another Life (after this) for his Saints, wherein they should live with him in Glory for ever. So Noah (as his Name fignifies) was a Comforter to the Church, faving her from the Deluge, which Reduced the World to its first Chaos or Confusion Gen. 1. 2. when the Waters above the Firmament and the Waters under met again together, and brings the Earth once more into her first posture to be covered with Water. Twas a peculiar priviledge, that Noah brought the Church nigh God in this great Floud of Waters. Pfal. 32: 6. Enoch was a Prophet foretelling Christs coming, and Noah was a Preacher of Christs Righteoniness, had greater Bleffings than Adam, having the Promile [I will no more deftroy]&c. Gen. 8. 21. 22. the Bow in the Cloud, and a new String to his Bow, the Everlafting Covenant, the pattern of all Covenants with Ifrael (oft mention'd by the Prophets) and the Floud (made fuch a Baptism to the Earth) also, as help'd to wash away its Curfe, which Curfed Earth shall become so Renewed, & so Bleffed of the Lord, yeafo much Christs Darling, that He Refolves to make it the Centre of his Glory (as some suppose) at the 7th. Millennium, or last Revolution of the Superior Planets Revel. 5.9. 10. where the Saints or Angels Rejoice, that they shall come (out of Heaven) to Reign upon Earth, thus God tells Mofes in the Mount, that the Land shall enjoy her Sabbath of Reft, not only a Temperal Levit. 26. 34.46. and. 34. 46. and 2. Chron. 36. 21. and Levit. 25. 2. 6. But an Eternal one. Hebr. 4. 9. which the Lord of the Sabbath (Math. 12. 8. Mark 2. 27. 28. Rom. 9. 29. Jam. 5. 4.) hath made for man; The whole Earth shall be filled with his Glory Numb. 14. 21. He will Cover, or Atone it Dens. 32. 43. God (not Adam) named the Earth [Erets] which fignifies [of Rassab] to Delight, as If He meant to take his pleasure upon it, when the Heavens, that Canopy and Curtain (now hiding his Glory) shall pass away as a Scroll of parchment before the Fire: God will come to keep his Sabbath of Rest on Earth, and here accept his People, then the Land of Canaan (more accursed than all Lands, while possessed by the accurs dNations) shall te most blessed, the Glory of all Lands: The place of Gods Residence and Delightful Rest. Exek. 26: 6.40. and 34.26.30. Hos. 2, 20, 23. &c.

The (Third) great Revolution (still adding another 800) falls out in the 2400. y. of the World under Moses, when the Church had again another Sabbath of Rest from her long and groaning slavery in the brick bondage of Egypt, this is so plain in Scripture History, I need not inlarge upon it as upon the 2 former, a word only, the blessed Messab which the 7th Revolution may bring in, is greater than Moses as much as a Son than a Servant &c. Hebr. 3, 3, 4, 5, 6. He will plague the Pharaoh of mystical Agypt with sorer and severer plagues (his Vials of wrath Revel. 16) till He make him yeeld, and let go his People as Exod. 12.31. He will not only bring his Church into the Wilderness (which was all Moses could do, leaving the conquest of Canaan to 90-

Shua)but bring her also into the Heavenly Country.

The (fourth) falls in the 3200. y. of the world (adding another [8] to the 24.) under Solomon and the Kings of Ifrael according to incomparable Tycho Brabe, this is likewise evident enough in Scripture, that the Church had her Sabbath of Rest under Solomon, that peaceable King, as his Name fignifies; yea and the Ark of God, that had (from Mo-(es time hitherto) no better harbor than in a Moving and Tottering Tabernacle, found a Sabbath of Reft, in a standing and stately Temple (the wonder of the World) not only for his time, but for his Godly Succeffors alfo. Still our Saviour whom the fire Revolution ushers into the Worldin v. 4000.) is greater than great Solomon. Math. 12, 42. He is the Prince of Peace, the maker and matter of our peace, our Sanctuary, and Salvation in whom alone our Souls find a Sabbath of Reft. Math 11, 29. This needs ftill less Illustration: Go forward, then 800. v. more to the (Sixth) Epocha or Revolution in 4800 y. of the world which brings in Charles the great, under whom, as the Roman Empire was in its Zenith, or most flourishing estate at Christs Birth, so now it was translated from Rome into Germany. This must be infisted upon a little, because this beyond Scripture History, 'tistrue the Church rould have but a flender Sabbath of Rest in his Time, for then Antichrist was Regnant, and Leo was Rampant, (Leo the 3d was then Pope, who prostituted his Keys to the Emperors feet, for which the Popith People whipt him like a Rogue, If not, plucked out his Eyes and cut out his Tongue &c. Frideaux Introduction pag. (96) yea in this 8th Century, Pope foane made a good proof that the Church of Rome was a Base. Whore; so that the Rest of the Church in this Age, was like the Rest that the Ark of the Covenant had in the midst of fordan, and that of the Friests of the Lord who attended it fosh. 4, 9, 10, 16. with 3, 13. The Feet of the Priests (that bare the Ark) did Rest in the midst of fordan, there they stood and must not stir out of their station until 600000 people were passed over the 4000. Cubits of dry Land within the banks, there they stand, they Rest in the midst of fordan, with hideous Mountains of water hanging over their Heads, a most Ghaftly and frightful fight without all peradventure, yet there they stood (till God cal'd them off) betwixt the People and Danger, fo do all good Minifters in all Ages, the first shock falls on them: The Church hath fuch thort Reftles Refts or Sabbaths sometimes, as Alt, 9, 31. then had the Churches Reft, and fucha Sabbath the enjoyed in this Emperors time, whom Eginardus (writing his life) calls a most pious and glorious Emperor, He waged his Wars principally to Extirpate Heatherifm, and to propagate Christianity, more than for Enlarging his Dominions Parens. Med. Hift. Ecclef. pag. 257 He trode in the path of his Father Pipin, and of his Grandfather Charles Martel of France, in that great Service of Christendom against the Saracens, had an Averseness though he Reconcil'd the Pope and People) from allowing the Popilh upholding of Images, which appear'd in a Councel held at Franckford, and his writing against the 2d Councel of Nice. He gave for his Motto, Christus, Regnit, Vincit, & Triumphat; Christ, Reigns, Conquers and Triump's. (This was much, even then when Antichrift began to be both Regnant and Triumphant in this 8th Century) Prideaux Introd. pag 229, 230 as this Motto expressed his Christian Humility in the midft of his Grandeur and Greatness, to the great shame of the Pepes Pride and Ambition in that time; fo it Demonstrated his prophetick Faith, that Chrift (in due time) would Trample Antichrift underfoot and Triumph over Him: He is faid to give unto the Empire not only a new Body, but a new Soul too by promoting Religion in all his Conquer'd Countries. Alfred, Encuclopad. pag 3019. He made Amicable leagues with fundry Infidel Kings and Princes, that they might be more Favorable to their Christian Subjects Parens Med. Hift. Ecclof. pag. 258. Alcuinus (our Oxford man, and one of Venerand Bedes Pupits)

was this Emperors Tutor, by whom he gave a large Testimony against Popish Errors, Hlyr. Test. Vers. pag. 704 and 724. and by whom the Holy Scriptures were translated into the Mothers tongue, the Pope at that time not contradicting it Alfred 3020. and Pridea ux 230. pag. to conclude, though this Great Emperor had some Tincture of Superfition with his piety, (faith Offandor) yet was he a Zealous promoter of Christianity, infomuch that Christ had his Churches, (in this 8th. Century) even in all Lands. Where they had a little Sabbath, or Rest, and kept their Sabbaths (as the Centurist faith) in I alastine, Agypt, Greece, France, Germany, yea and in our Britain, as at London, York, Beverley, Crowland, Canterbury &c. All named. Offand: Epit. Hift. Eccles. Cent. 8. lib. 1. Cap. 12. pag. 5.6.7.8.9. would to God our King may become another Charles the Great to protect the Protestant Religion in all Lands: Helvicus saith Aaron King of the Saracens gave this Charls Mount Calvary in ferufalem, and the Sepulchre of Christ God give to our Charls a share in Christs Kingdom. Now come we to the (7th.) or Sabbatical Revolution (which makes the former 8th. to be now the 16th. Century. The beginning of which makes the World five Thousand six Hundred years old: As the fixt climasterical Conjunction turn'd the Empire from Rome to Germany in the 8th. Century. So this 7th. may both turn it and barn it (with the Honse of Austria and the Pope of Rome) out of the World. As the 8th, Cent. gave a little Rest or Sabbath to the reformed Religion, which hath been miraculously Rested, though Arrested by the malice of Rome both before and fince Charls the 5th, but this 16th or last may be a Sabbath of Sabbaths, and proclaim a fabilee of Triumph. To apply this General Discourse particularly to our present purpose, as also to obviate Objections, some Observations (both Astrological and Theological) may be here usefully added.

(1st.) Astrological, (1) observe in the General there is no Arrival at perfection in Astronomy, the best Artists have erred, even in their best works, Humanum est errare, the best Astronomer may say with the Man in Terence, Homosum, Humanum à me nil alienum puto. Men, as Men, yea the best of Men may mistake: The very Masters and chief Luminaries in the Astronomical orb (such as Mercator, Maginus, Morinus of France, Lord of Knudstrobe, Andrew Argol of Padua, learned Hecker and Kepler himself) are all found faulty, and in some things committing Errours, especially in the places of the slowest paced Planets as are Saturn and Jupiter: None agree in all points, nor is it one man, or one Age, that can set these Differences to the Rights: as Mr. Gadbury ingenuously acknowledgeth in his Epistle to the Reader both before his 10 y. and his 20. y. Ephemerides (2) ob-

crue

ferve in particular, neither do astronomers Agree among themselves in Affigning the Time of this 7th. Clymatterical Conjunction in our 16th Century, but have differing fentiments about it. Alfted (that alignis is omnibus, Universally learned in all University Learning) fays, that it happened in the Year 1603. December 24. ('tis 14. in another place) at Noon in Sazittary, Encucloped pag. 1105.1106.and 1215.1216. and 1285. 1286. in the first of which places, he calls it the 8th. Conjunction fince the Creation (Reckoning the first Inclusive at the Beginning of the World) as it it shadow'd out not only the Christian Sabbath which is on the 8th. Day or first Day after the 7th. (on the 8th. Day was Circumcifion celebrated, and the Pfalms on Sheminiths or Eights) but also that Sab. of Sabbaths, the Millennium Sab. to be Vsher'd in thereby: Yet in his second place quoted, He calls it, but the 7th. Conjunction pag. 1216. where the first at the Creation is exclusive, and not Reckon'd in the Number, to Represent it more purely Sabbatical in the 7th Number. In his Third place He adds, that this 7th Revolution portends not only great and Universal Commotions (in Church and State) but also some glorious Reformations, which (be faith) cannot be accomplished without great Concussions in Kingdoms and Countrys. But Engl. prophetick Merlin contradicts this, not only in its Computation, as to time, (affirming it to be on Decemb. 7th & at the 7th.hour 47. minutes pag. 22.) but also in its Denomination, as to name, for (faith He pag . 57.) that Conjunction may properly be called Magna. and was no other, but it had been Abfurd to have call'dit Maxima, it was Great, but not the greatest, or Climatterical, because it was not in Aries (which is the first of the Zodiack a Cardinal fign, de.) but in Sagittary.

This is most certain, it must be one of those 3 sorts, Greatest, Middle or Meanest, either that sort of Conjunctions which returns not above once in 800. Years, or that of 200. Years, or that of every 20. Year, and this last is the more probable seeing we find that after the Conjunction in 1603. there was another after that 20. y. in 1623 another after that 20. y. in 164\frac{3}{3}. Another after that 20. y. in 1663. and now another after that 20. in this present year 1682. However The Author aforementioned doth well to call that in 1603. a great Conjunction, because it was attended with very great and most memorable matter, that James King of Scotland should become the Mighty Monarch of England, and of Ireland too, and that without either Blood or Blows; what was this but a setting up in effect (even by a Miracle) a New Monarchy, especially considering that old Antipathy betwixt Scots and English: That prudent Prince, brought peace not only to England, but also to Europe: yet in some sense.

those other Succeeding Comunitions (in the Interval of 20. y.) before named, may be called great, as well as that in 1603. in Respect of either some great Good, or some great Evil attending them : For as that in 1603. was attended with the Death of good Queen Elizabeth: So was that in 1623 with the Death of King fames, and that in 1643. with civil uncivil Wars, and that in 1663. had both the dreadful Plague and Fire following it: And God knows what great Matters may also attend this pretent Conjunction in 1682, whereof more afterward: As to that common Notion, that climasterical Conjunctions (which be but 7 in all as above) must be in Aries, because it is the first of the Signs of the Zodiack, Chief and Cardinal, and under it the World (some fav) was created, and therefore must be the chief Epoche of the mightieft Matters and Mutations in the World: Against this I must enter these Exceptions (1) who told them that the World was created under Aries, furely Moses (with all his Learning of the Agre ians) did not tell them fo, nor Abraham, nor fob who both are reckoned up as skilful in Aftronomy, 'tis therefore grain Dictum, and a being wife above what is written: (2) I find in the best Tables of Calculation (I can consult with) that the (first) Conjunction (Recorded therein) was in the 3d year of the World, and that in Saittary. The (2d) was 23d y from the Creation in Leo. The very Sign of our present Conjunction) and the (3d) in the 43. y. to be in Aries Then the (4th) in 62. y. in Sagittary, and the (5th) in 82. in Leo, just as it is now in our (82 reckoning by 20s (or thereabouts) betwint that and this all along from the Beginning of the World to this year. (3) In the Tables of Kepler (the best in the World, improved by Maginus) the Sign Leo bids fairer for the place of climatterical Conjunctions, than Aries, seeing the first in the Tables (exclusive) was in Leo, A. M. 23. and the first Revolution of 800 y. (which is the periodical Motion of Saturn and Jupiter) after that falls in 817 y. of the World in Leo again, as the Tables tell us: If we reckon this (as well we may) for the first climaterical Revolution, then we find there again, the second to fall in 1611. in Leo too. As the first down from the Beginning to Enochs Time, fo the second reaches to Noahs Days, and to that universal Deluge. The third to Moses in the y. 2406. and Ifraels Deliverance from Egypt, which was again in Leo. The fourth to they. 3200. (as some say) to the Medes Monarchy, or (as others) to Solomon, and the Kings of Ifrael Then also was the Conjunction of Saturn and Jupiter in Leo also. The fift to y. 4034. the Time of Christs Resurrection, and in the 34. of Christ these 2. Planets met a. gain in Leo, as Representing, that the Lion of the Tribe of Judah had then conquered Death, the Grave and Hell, who foon after Afcended into Heaven. The fixth to 829. y. after Christ, the Time of Charles the Great, whose Offspring possess'd the Imperial Throne for an 112. years, Parem Medul. Hift. Ecclof. pag. 260. and that Time also had a Conjunction in Leo of the 2 Superior Planets : The fewenth (and poffibly the last) brings us down to the 16th Century, wherein we find no Conjunction of Saturn and Jupiter in Leo till we come to 1682, therefore may we more probably conjecture that this 7th Conjunction prefent in Leahath some secret Mystery of Sabbatism init, and promifeth something (in its signature) of more singular Moment to this World, than any of its Antecedents. (4) Astronomers do grant, that when the 2 superior Planets dopais out of the watery Trigon, and have their Meeting in the Fiery (be it in Leo, Sagittary, or Aries in which soever, their Conjunction is) 'tis a great Conjunction, and portends great Mutations, not only because these 2 Interchanged Triplicitys are contrary as Fire and Water, but also their Abode in one Trigon is a bout 200, y. And if usually 7.y. (the Term of Mans Life in Law)bring Changes, what may 20, y. (their least Conjunction, and about 3 Mens Lives) do; much more may 200. Y. (the Time of their Mean) but most of all the 800. Y. which is their Chmasterical Meeting: New Empires &c. may well arise in that Time. (5) Spineus Phy-Sitian to the Duke of Padna, who wrote Catafrophe Mundi. 1625. y. and Engl. shed by Squire Ashmole, faith pag. 24. that of all the 3 Signs in the fiers Trigon, Aries is the weakest, then must it follow that Leo is stronger: And at this Time especially considering, (6) This present Comunition in Leo comes Notably corroborated in 3. Respects, (1) it is attended with 2 frightful Comets (the first esp. the like whereof hath not been this 800. y.) as feal'd up in its fignificancy with a double Signet, or Seal Royal. Alfred &c. affirm, that fuch Con junctions, so seal'd, are most significant. (2) their Conjunction is near Con Leonis, (a Royal and Couragions creature, whose Heart is the Seat of his Courage) which must add to its significancy, seeing those 2 greatest Planits go into this Royal fign and so near the Heart of it, entring there (as it were) into a deep Confult and there confronting the Sun: (3) That Mars should meet first Jupiter upon the th of this last September, and Saturn up on the 12th to strengthen them both with his conjoined Rays, as both pass'd along in Tendency to. wards this their Great Conjunction all these Meetings are in the same Sign of Leo, though now Mars be going off from canda Leonis, as dropping down from off the Lions Tail intothe Sign Firgo, wishing them (as it were) an Happy Meeting, which (nodoubt) will be to according to Rules of Art, for fupitor, having the higher Elevation, and being above Saturn as yet, must correct Saturns Malignity,

Halys comment on Ptolomy 63. Aphorism; beside, both Supiter and Saturn are oriental and fo is Mars, which is a Situation judg'd the least obnoxious, Saturn (fay Artists) makes Plots, but Impiter (above him) spoils them: both the Two and Mars are occidental to the Sun, and therefore (faith) Almanfor propos. 30.) They must give good at the latter End, though the way to that End may be rough and rugged enough, esp. to the Northern Regions, they being all so nigh to the Tropick of Cancer, (their Diurnal Ark, (or March)in our Horizon pouring down their Influences for about 15 Hours) and both Saturn and Mars being (what Star foever they are joined with) fo mischievous to Mankind: What their 2d Conjunction on January 30 in the Y. (83 and their 3d Conjunction again upon May the 2d in the same next Year 83. (all Three in Leo though in 2 distinct Years immediatly fucceeding each other, and all 3 in the Compass of 8 Months, which is far thort of the distance of 20. years, (for this great Comjunction confifts of all thefe 3 Meetings, that a 3 fold Cord may not eafily he broken; Whereas, as is abovefaid, their least Conjunction hath the Interspace of 20 years) may conduce hereunto, time will best declare, for Truth is the Daughter of Time: Confidering also, that the Sun will lose its light so soon after this first Conjunction October the 9 (82 & so Tittle before their second in January 30. in (83; for in the same Year and Month upon the 17th Day of January in the Y. 83, that great Luminary will be Ecclipfed, and 9 Digits darkened in Aquarius, about 3 a clock in the Afternoon, much more might be added here, but lat verbum sepienti &c. I have duly and daily observ'd the Motion of these 2 great Planets (every clear Morning) fince they came nigh cach other, and do wonder that they should be so swift in their Motion (Saturn running 2 Millions 376 Thouland 261 Miles in an Hour, and 3964 Miles in one Minute, and Jupiter running 898 Thousand 700 Miles in one Hour, and 14 Thousand 9 Hundred 78 Miles in one Minute) yet are so flow in their Meeting; For I find Saturn requires 12 Days in his Diurnal motion to go this one fingle Degree in Leo, and Supiter requires 7 days for the same, before they can come through the 18th Degree of Lee to conjoin in the 19th, distant only Minutes (whereof there be 60 in every Degree) on the 9th of 8ber 1 82, then on the 10th Day Saturn marches off 6 Minutes and Jupiter 8 from their so near Application: It must be considered also, that the proper Motion of these 2 Planets (as of all the other 5.) is from West to East upon the Pole of the Zodiack (though the primum mobile or upper Heaven hurry the nupon the Northern & Southern Poles from Raft to West) as plainly appeareth in the Motion of the Moon (one (fthe Planets) which at her Change is setting West, every Night falls falls backward, and backward towards the East, till at her Full she

Rifeth in the East, in about 15. Days.

217, Theological, that it may (1) appear This Difcourfe is not Chaldaization or the folly of the Chaldees, to much condemned in Scripture; for Astronomy and Astrology must not be confounded as too generally they are : That the Stars have a 3 fold Excellency (light, Motion and Influence) is granted by all that are Judiciously Learned: All the Controversy is about the last: Concerning their Influence, there be 3 Opinions (1) in exces (2) in Defett, and the (3) in the middle between both: The 2 former extremes are offen ve, but the 3d is ino Tensive, (1) Those in the Excess were the Chaldeans, Arabians, Egyptians, Stoicks, and many fews, yea and Gentiles too both Heathen and Christian, who Account the Heavens to be a Book, wherein the Fates of All are written, and who make their Schemes and Horoscopes from thence as Creditable as the Gofpel (2) Those in the Defett are fuch as Censure all forts of Astronomical prognosticks for Fables and Fooleries. To fay, Heavenly bodies do produce no effects by their powerful Influence, is to Deny both Scripture and Experience: They both offend in Contrary Extremes in faying, that the Stars either do all things, or that they do nothing: therefore (3) The middle way betwixt thefe two Extremes must be most Approved.

In Medio tutiffimus Ibis.

Ecclipses may certainly and changes of Times may probably be prognosticated : fob was Undoubtedly a great Astronomer, yet a good man and Holy in his Aftronomy, knowing Arcturus, Orion, the Pleiades and the Chambers of the South. Job 9.9. Yea and the Dragon (whose nodes have all the Eccliples, and Seated betwixt the 2 Bears, not far from the North-pole,) fob.26, 13. and God (himself) Discourseth with Job as with one Conversant in that study, Job 38,31,32,33. Where the Lord Afferts an Influence in the Stars, and that Irrefiftible as to Man, Job cannot bind it up or loofe it out and let it go, the power of Binding and loofing perrainerh to the all powerful God, who is the fole Guide and Governor of them, and who hath placed a Dominion in them over all Elementary bodies: which is expresly mentioned in these words [canst thou set the Dominion of them on the Earth] fob 38, 33. God hath. put a Power into the Stars to Rule the 4 Seasons of the year &c. This is call'd [The Powers of Heaven] 3 Times Recorded by Christ himself Matth. 24, 29. Mark 13, 25. and Luke 21, 26. and furely those powers cannot be Insignificant, Denli & Natura, nil facient frustra. God and Nature make nothing in Vain. They have then a Power, Dominion,

or Influence, which no mortal men (though never fo many, or mights) can either binder or haften : Thus Amos a forthat Heard man and Summer frait gatherer (neither a Propher, nor the Son of a Propher) Amos 7. 14) yet) was a most notable Astronomer discoursing notably upon the Stars) Chimab and Chefil] 2 years before the Noved Earthquake. Amos 1, 1. and 5, 8. as likewise upon the Spheres, those 3 Stories of Heaven one above another, before the Famine of the Word. Amos 9,6. and 8.11. yea and Hofea brings in God Reckoning the Heavens to be next in power (the next Veffel of Mercy) to Himfelf. Hof. 2, 21. where the Prophet fets down a Concatenation of Caufes concerning Divine providence, which the Wizzards of this World, either denge or deride; Laftly Moles (when He bleffeth Ifrael as their Civil Father, as faceb. their natural Father had done before Him, Gen. 49.) Declares therein How the precious things of the Heavens do bring forth the precious Things of the Earth, Deut. 33, 13, 14, 15. So that Stars are not fet and feated in the Heavens [ornarm gratia] merely for Ornaments fake (as Baldwin in Cales of Conscience p. 780. excellently Demonstrates) They are not only for Garnishing the Under-Ceiling and stately Vault above our Heads (as fob fays, fob 26,13 but Mofes Intimates, that they are the Treasurys of God) having Treasure, laid up in them, the Stars are Gods Store-houses out of which He feathers his precious things from his Heaven upon the Earth, faving [The Lord shall open to thee his good Treasure Dent. 28, 12. Every Star (faith one) is as a purfe of Gold, out of which God casts down Riches, that Good Men gather up by Honest means, but the Evil scramble for by fraud, or by Force : that the Stars be Signs all do grant, and in some sense, Causes: That they be Signs, is grounded upon Gen. I, 14. [Let them be for Signs] yet forme do narrow that word, faying, they are only Signs of Night and Day, if fo, then the Sun and Moon had been enough to fignify both thefe, fo all the Rest (of the Thousands and of the Millions) be altogether superfluous, Frustra fit per plura quod sieri potest per pauciora, what need many, where two will do, 'tis against Common sense as well as expres Scripture to deny that those Celestial Bodies are not Signs of Times and Seafons alfo, as of Summer and Winter, Gen. 8, 22. of Weather &c. yea Learned and folid Pareus on Gen 1, 14. Excellently Argues, that the Stars could not be call'd Signs unless They did fignify fomething, and that fomething (He faith) is, to warn mortals of many Matters fuch as be (1) Natural (2) Civil (3) Spiritual, and He Approves of that Verse of Aratus.

The Stars fignify to men what matters are forged or framed for them: As (1) Natural Signs they be, of Heat, Cold, Dryness and Moifture &c. (2) Civil, the Sailor must Hoise up his Sails (as the Word pleiades fignifies) when those 7 Sisters bring in the Spring with their (weet Influences. So for fetting, fowing &c. (3) Spiritual, their Aspects, and Passions (saith he) are Signs of spiritual Events as both Scripture and Experience teach, such as Ecclipses, Comets &c. For though these things have their Causes in Nature, yet do oft portend horrible Changes of publick Affairs, Seditions, Wars, Droughts. Inundations &c. for fo much as (He faith) they, either do naturally excite those fore Judgments, Through divine Pleasure, or do certainly affift the Causes thereof, therefore they do foreshew, and are Signs of Gods Displeasure, whereby Men are alarum'd to Repentance: Though the Rainbow have a Natural cause, (as the Reflection of the Sun-beams in an opposit watery Cloud) yet is it nevertheless a Sign of Divine Clemency (Gen. 9. 8.) for preserving the World: How much more must those preternatural Passions of the Planets be Signs of either Gods Anger or Favor. Parens on Gen.pag. 54. Col. 1 2. All this He laith, though in pag. 55. He shews himself no Friend to Judiciary Aftrology; which Dr. Willet likewise declares to be repugnant to Reason as well as Scripture, and its practice (in telling Fortunes and finding things loft &c.) to be Vain and Impious in his 20th. Question Gen. 1. 14. My opinion is, Astrology in the General is lawful, provided it keep within its due Bounds, and pry not too far into Gods Secrets Deut. 29.29. Tis only the allknowing God who can foretel future Events Ifa. 41.21. 22. 27. 1. Ecclef. 8.7. and 10. 14. &c. Man knows not what Shall be, no nor the Devil (notwithstanding the Subtlety and Sagacity of his Angelical nature, together with his long Experience) to help Man, therefore all his Oracles He deliver'd in ambiguous Terms, that he might fave his Credit when deceiv'd. All Apollo's Oracles were made by Afrolo yfaith Enfebius. De praparat Evany. 16. 6. cap. 1. with lib. 5. cap 10. And they were not only directed by the A pect of Stars, but also ministred by Familiar spirits. Yet the Starry Heaven is a facred Alphabet, wherein the Wildom, Power, Justice and Mercy of God are Linedout to us, these all be written Legibly, yea Palpably (as the word Act 17. 27. fignifies) in the Brows of the Firmament; hence Clemens Alex: Calls it the first Bible God made for Mans instruction; tis one of the 3 leaves of the Book of Nature which every mortal should read and consider. Thus David did, He read it. because it declared the Glory of God. Ps. 19. 1. yea every line of that leaf, he knew how far reached the length of those lines, what David calls a line, Faul calls a Voice, Rom. 10. 18. quoted from Pf. 19.4, reading

Reading Divinity-Lectures to all the Inhabitants of the Earth, that they may make a serious contemplation of them, and David considered as well as Read it. Ps. 8, 3. All men as well as He, should be much in this Consideration, this Appears, because (1) herein lays the Difference betwirt Men and Beasts which cannot consider any thing (2) The bolt upright figure of mans Body doth admonish him hereos.

The Heathen Poet Ovid could say thus, Os Homini sublime dedit, calumq, videre Insit, & erectos ad sydera tollere vultu.

God with a lofty look did man Indue Commanding him the Heavens and Stars to View.

(3) We are taught this duty by the fift Muscle, which God hath given to mans Eye (whereas other Creatures have but four,) for drawing it upward, at ejus Auxilio Calum Intueremur, faith the Anatomift, that by the help thereof we might Contemplate and Confider the Heavens: some Heathers (to the Shame of some Christians) have said, they were therefore Born, that they might Contemplate the Heavens: Alas, many make more Delightful Contemplations upon Lumps of Earth, than upon the Lamps of Heaven, as Duke de Alva, have fo much bufiness on Earth, that they have no Time to Look up to Heaven; let us consider them, & cry with David. Lord what is man &c, P[8, 3, 4. in looking up, we behold every Star Twinkling at us and (as it were) Beckoning to us to Remember our Creator Ecclef 12, 1. Tis not presumption but Duty to Read the Face of the Firmament, Math. 16, 2. Luke 12, 56. 1 Kings 18,43,44. Read this Leaf while it is Expansum, an open Leaf, for it must be Rolled up and Folded together as a Scroll, Ifa. 34, 4. and Rev. 6, 14. yet rest not in Reading this Book of nature, that only Declares Creation-Love, 'Tis the Book of Scripture in which Redemption love is Discover'd, we are no where bid to search in the former (as in the latter. John 5, 39.) for Eternal life: 'Tis faid, Ubi definit Philo'ophies, ibi incipit Theologius: So where Nature Ends, and can go no further, there the Scripture begins, and giveth more grace fam 4, 8. Ifalm 19, 1, 2, 7, 8.

(2) But the grand Question is, though Stars be Signs, whether they be also Causes, seeing Moses calls them Signs Gen. 1, 14, but never causes. A. Baldwin saith, Stars do incline & irritate, but do not necessitate, p. 780 Cas. Consc. & Amesius calls them common causes, Cas. Consc p. 19 1. Alsted stiles them Cause adiuvantes ibid, as if they were Auxiliaries, the soundest Divinity saith, they are general Causes only, but not special, so nothing

can be infallibly foretold from their positions. Mafes did call them Signs not Caufes to prevent Idolatry, much less did He call them Prophets. as it they could predict future Events with any certainty: Hence Spiness candidly confesses that Aftrologers can but conjecture, none but those inspired by God can foretel, (as Amos 3 7.) Catastrophe Mundi, page 11.12. The same say, Kepler, Tycho, Alfred, &c. Kepler makes a more modest Observation than Cardan; saying, the wife Men who were led by a fignal Star out of the East, might by the Rules of their own Astrological Arr make some Conjectures of an Eminent Event, and of the Birth of a mighty Monarch because (faith he)that Comet (as he calls it) appeared at the very Time, when their was the fift Climasterical Conjunction of the 2 Superior Planets, (Saturn and Supiter) in the fiery Trigon: Yea the Head Masters of that Mystery do grant, that though the various Politions of the Stars have great Effects upon fublunary Bodies, yet peremptorily to affign them is Presumption, for the Efficacy of the Stars above our Heads, and their Specifick virtues cannot be fo well known to us as may be that of Herbs, which we can take in our Hands and do tread upon with our Feet, and therefore, long Experience of fuch and fuch Effects following Comets and Conjunctions, do teach more and better than all Aftrological Rules, Maxims or Aphorisms: Indeed Sir Christopher Heydon steps a little farther, saying, that their Effects be by long Experience certainly known, though the Caufes be unknown, and cannot be demonstrated. I must confess, this Affertion holds true in fome other Cases more familiar to Man, and such whose Causes and Effects are (each of them equally) more nearly conversant with us, than are Celeftial Canfes and Terrestrial Effetts; as for Instance, it hath been my own many Times Experiment, how Harmony in Mufick (upon mufical, well tuned & stringed Instruments) will strangely & frontly Affect even at fime confiderable Diffance: As thus, hang a little crooked Straw upon the Base or Remotest string upon your Base-Vial, Lute, or Harp, make the trobble String either Unifons, Diapafons, or Dif-Diapatons (that is, either Ones, Lights, or Sixteens, in which Notes do confift the highest Harmony in Musick) and your stroke upon the Trobble (either fop'd or open to make those Harmonious Sounds aforefaid) will cause the Straw to cut Capers, and to Dance a Gallyard, leaping Levalto's all along till at last it falleth down, which will not fo much as move, no not, if it be placed upon the nearestthring to the Straw (as I have often tryed) at any other Note: No Reason can be rendred for this, save only, 'tis from Harmony in Mafick, which is like the poor Shift of the Philosopher when Non-plus'd with the Sympathys and Antipathys in Nature (both of Plants and Beafts)

Beafts this Retreat for a Solve or Salve is, 'tis an occult Quality, which is Tantamont, the great God hath posed me, I know not she Reason. The like is well known (as to the Matter of Fatt) How Geometrical Symmetry in mufical Sounds and Voices, will-marvelloufly Affect the Heart of all that are not Melancholick, yet the manner of its Operation is hard to be Demonstrated: As it is not doubted, so neither must it be Denyed, that those Celestial and Ætherial Stars do much Affest all Terreitrial and Elementary Bodies, (both Plants, Beafts and Men that are upon the Earth, and Subterranneal Metals that are within the Earth) by those powerful Influences which the great Creator did Concreate them with, and placed in them otherwise, we had never heard of the sweet Influences of the Plesades or 7. Stars, fob 38, 31. (those 7 Sifters or Lovers have an Irresiftible Inquence to produce the Spring-flowers &c.) nor ever have been call'd upon to pay our Tribute of praise (upon our beholding the Garnished Heavens) to the great Creator of them for mans good, as we are Plalm 136, 7, 8, 9. with ver. I. (seeing they Thrust forth out of the Earth somany precious Creaturecomforts for us. Dent. 33, 14.) nor ever have heard how the Stars fought in their Courses against Sistera Judg. 5, 20. The Stars are call'd the Host of Heaven, Plal. 33, 6. (and in many more Scriptures) where the Pfalmift makes the first mention of this Hoft, as the most glorious part of Creation work; and how did this Hoft fight against Sifera: Much like to many Soldiers that observed both Rank and File, or rather like so many Regiments, God (their generalissim) call'd forth now one Regiment and then Another, drawing up their extraordinary Influences to Confound his and his Peoples Enemies therewithal: Some take these Stars Metaphorically for Angels as 2. Maccab 10, 29 and 11, 8. but the literal sense is more proper, for God made those [Hachochabim mimmisilotham | Stars from their stations to stir up storms (according to their Natural Influence) and to Dash Hailestones, Lightning, and Thunderbolts in the faces of the Curfed Canaanites, as Tofephus faith Antiquit. lib. 5. chap. 6. Those Stars could more easily, more strongly, and more Hittingly cast their malignant Darts or Rayes from their High Stations (as Mifiloth fignifies) Downward upon those foes below (than can possibly be catt from below upward for Killing work) Esp. God Directing these Darts to Hitt their appointed marks, Notwithstanding all this, we may not place the Stars in Gods stead, as to Ascribe to them a Supreme Dominion.

Indeed these Superior bodies have (expressly) 70b 38, 33. a power or Dominion over our Inserior, unto which we are Subject and must Submit, yet is it only a Ministerial power, a Dominion subordinate to the Appointment of God: He may use their Ministry Respecting the

E

mighty matters of this lower World (as He did against Sifere)ver may we not fay, that the lives and Fortunes of Men, the Fates and Changes of States Depend wholly upon the Stars, and may be foretold by the Temper, figure, colour and Posture, of the Planets, This is a Divination Condemned by the Word of God. Deut. 18, 10. 1/a. 47, 13. &c. and 'tis a putting the Stars in Gods flead; whereas All created beings (yea the very Planets themselves) are in the hand of God. Indeed Plato in Timao, calls the Stars Gods, fuch as the blind Gentiles, and fome Blockish fews made so, not only in observing them (which all ought to do) but also in Adoring them 2. Chron. 33, 3. ferem. 44, 17. Cc. contrary to Dent. 4, 19. Cc. I could wish that the names of those Planets were Reformed from those of Saturn, 700 piter, Mars, Mercury, &c. Seeing all these were Names of the Heathen Gods, which should be spetted out of Christians Mouthes with utmost Detestation, Exod. 23, 13. Pfal. 16, 4 and Hof. 2. 17. Hereupon the Primitive Christians did dislike those names that Mercurius Trismegistus had given to the Days of the week, such as Dies Saturni, Jovis, Martis and Veneris &c. Defiring to thun all Semblances of Idolatry, and fearing to countenance those Heathenish Dunghil Deities: Reverend Beza faith, he had rather still Retain the Hebrew Names, [Has, Chefil, and Chimah, than call them Ariturus, Orien and the Pleiades, which have beenn so much Abused with the obsceen Fables of profane Poets: I am Constrained to call those Planets by their common Heathenish Names for Distinction sake and by way of Recital, as Baal Rom. 11, 4. and Cafter and Follux, Acts 28, 11. are mentioned by the Apoftle, non Honoris gratia, fed tantem Recitative, not to pay them any Honor, but in the way of an History only, it being there an Historical Relation. Gualtherus hath an Excellent Note-upon Zeph. I, S. &c. [them that Worship the Host of Heaven upon the Honse-top] faying, let those that profess fudiciary Astrology obferve this, they worship the Stars no less than did the Heathens of old, and do openly bring in Heathenism again, while (first) they call the Stars by the Names of those Heathenish Deityes, which ought to be Abolish'd; as above: (2dly) they put the Event of all things in subjection to those Stars, year even of Man himself, as touching all his Manners and Fortunes which (as the Scriptures Affirm) do Depend upon the Eternal Providence of God Alone. I add a (3d) to Gualter, their putting the Government of the World under 7 Planetary Angels, giving names and Times of Government to them Unscripturally. This is Intolerable Impiery, and they that fall into it, shall not escape the Just. Judg-

Tudgment of God, Great Angustine calls this no better than the Doctrine of Devils, faying this kind of Divination was of the Dewils Teaching: De Civit: Dei. lib. c. cap. I. pag. 70. par. 2de. Yet in propriety of Speech, that is not Divination which speaks from Signs and Causes, but from Impulses and Inspiration Beza Ep. 29. now to propose the Planets as both Signs and Causes not only of Natural, but also of Voluntary things (without any Respect either to the Free-Will of Man or to the Free-Grace of God) Reducing All under a Fatal Necessity and Determinations of Planets, This must needs be both great Folly, and gross Idolatry. No Doubt, but the Flanets have a mighty power over the Bedies of Men, yet 'tis wicked to fay that the Sal also is subject to Stars, and though they may have some Influence upon the passions and Affections of the Soul, which do naturally Arife from the Temper of the Bod, yet can they not Incline, much le's Inforce the Will of Man, but least of all the Will of God, and therefore cannot afford any Certain Divination: Besides, the Planets are but Universal and Remote Causes (at the most) and there be other more near, and more particular causes Intervening which may (having a power of their own) either Refift or Remit that force defcending down from the Stars.

This probably may be the True Reason, why the very Conjeturers themselves do so much disagree among themselves in their

own Conjectures.

Suppose Pythagoras and Plato's Notion hold True, that the Motion of the Celeftial Spheres (call'd Motus Trepidationis, a Trembling Motion makes a most Melodious Musick, and suppose that Musick (being Celestial) (hould make a greater Impression upon . the minds of Men (though they hear it not by a Virtual Contact, than any Terrestrial Musick (as is aforesaid) can do) vet this occult Quality (as to the matter of its effects, as well as to the manner of its Operation) cannot Afford any better than an occult or obscure Divination from the obscurity both of the Causa and of the Cansatum: which have the same Quality: Now if the Devil himself can foretel nothing but such as are [in causis coenitis operantibus] in their Canfes both known, and in their very working too, much less can any Mortal Man (far thort of his Subilety, fagarity and experience) Declare moral matters long before there is any working in their natural Causes by Astrological Rules, such predictions must needs be Uncertain, Vain, if not falle, yea sometime Blasphemous. There be some such predictions, we would have gladly prove true [quod Volumus, facile credimus] as this, That

Mars never leaves Leo and goes into Virgo, but then the Enemies of the Protestants go down &c. on the contrary that of Cambden, that Saturn never passes through Leo but he leaves a plague upon this City.

of London: God forbid it.

To conclude then with (not peremptory Conclusions, but.) fome probable Conjectures partly Aftrolog. and partly Theolog: (1) give me leave to fay with Nunita propheticus. Page ; my Nature hath hitherto abhorr'd predicting Events by the Stars, yet feeing the Congress (or Conjunction) of the 2 Superior l'lanets have an Iliad of Evils mostly attending them (to fall some where) so must portend great Matters, yet it is beyond the Knowledge of Man to make any pofitive Prediction from them upon whom it will fall, or precifely when that Great Subbath, or Time of Rest shall come upon the Earth: He reckons many Reverend men (fome that lived while the Bloud of Christ was yet warm) who taught freely and fully (of this Golden Age, or great Salbath to come) with the Applause of all, and contradiction of none &c. Which future Felicity of Gods Servants upon Earth may well be portended by this 7th, Sabbatical and Climacterical Conjunction: (2) concerning the precie point of Time when this Day of Refreshing. Acts 3,19. and of the Restitution of all things v. 21 shall be, no mortal Man can determine; indeed, so many Men, so many Minds, One Author affigns this Year, Another that, a third differs in his Account from both: And (in truth) fuch is the Vincertainty of Chronology, that it is impracticable if not impossible to fix any Certainty here n: The Computation of Time from the Creation to Christ is made in that Variety, that Alfred reckons up about 24 several Ac. counts and Conjectures thereof in his Encuclopedia. Page 2993. Now if there were fo much Vicertainty in that Chronology before Christ (wherein the Records of the Old Testament run all along as a Thread for Guidance in that Labyrinth) how much more fince Chrift, which hath not a Scripture-Chronicle to direct us beyond the first Hundred years: And in the very first Century, there must be much Obscurity; for the Pagans, who were so Cruel, as to Kill the Authors, would not be fo Kind, as to Keep their Books: See my Discovery of Antichrists. Rife, Reignand Ruine. pag. 147, 148, 149. Oc. (3) Notwistanding the Variety of Minds in stating this great Matter as to Time, yet all do agree vnanimously, and there is a Concurrence of Sentiments on all Hands, that this thrice happy and golden Age is now at hand, & the Nearer we may well suppose it, because the 7th Conjunction must be attended (as all the former 6 have been) with Great Revolutions : The great Champion of this Sabbatical Doctrine Alsted doth (confidently enough) determine the year of Christ 1694 (which is now about:

about 12 y.hence) for the first Year of that Triumphant State or Happy fubilee : And I cannot but wonder to find Trithemius Spineus, Cardan and Tycho Brahe all speaking of a new erected Kingdom about the Year 1700. (which is about 5 or 6 years beyond Alsteds Account) In quo omnia Nutu Unim Regentur &c And betwixt this great Conjunction (renew'd again fan. 30 and May 2d of the next year) and in that 17 Century I find not any other of these 2 Superior Planets (nor will be, till their 20 y. Return from this Meeting) only as great an Ecclipse of the Sun I find March 29 in the y. 1693 (about Alfreds year aforementioned) as was that in the v. 1652, which than gave the Denomination of Black Munday accompanyed with most Black Effects: (4) As to these that have put so much stress upon the v. 1666 (a year fatal to London, not to Rome that mystical Babylon) Time it self (the best Interpreter of dark Mysteries) hath confuted: That was before this Great Conjunction (though not before a Great Comet in the y. (64) voles we reckon from Christs (not Birth ; but) Ascension (for then was made Christs Visible Conquest) which will be a fit Salvo for the aforesaid, as adding 34 y. more to 1666, betwixt Christs Ascension and Descension to Restore all things, which is not yet elaps'd, but falls upon the 17. Century. (5) there be others, who judge the Time uncertain, and certainly their Indgment (in my Judgment) is most certain: However this is a fovereign Cordial against all our interveing Cordoliums, that our Redemption draweth nigh Luke 21, 28. therefore are we bid to look up, and to lift up our Eyes on high upon those Heavenly Wonders (the Conjunctions and the Comets) Isa. 40, 26. And lift up your Heads &c. (as before) or [exhilarate corda] cheer up your Hearts, as that Luke 21, 28. is interpreted : or firesch forth your Necks (as' Anong egobia Rom 8.19. fignifies) which is either a Metaphor from Birds that thrust forth a long Neck out of a Cage, or else from Men that earnestly look and long for some special Friend a coming, as Siferas Mother did, looking out at a Window and crying [why is h's Charet fo long in coming] Judg. 5, 28. when ye fee those things come to pas, faith Christ, that is, when ye behold these Signs, Prodigies, Ecclipses &c. Then know your full and final Deliverance is not far off, see Rom. 8, 19, to 22: (6) Whereas this Intimation cutts the Worlds continuance (in flate quo] short of 6000 years, 'tis true, it seemeth to do so; The Hebrew Cabbalifts do indeed observe, that in the first Verse of the Holv Bible there are fix Alephs, who from thence conclude, that the World shall last fix Thousand Years reckoning each Aleph (as it stands in Gen. 1. 1.) for a Thousand: Suitable to this (in point of Time) is that other Rabbinical Notion, that as Solomons-Temple.

Temple was finished in the 3000 y. of the World, so the spiritual Temple shall be consummated in three Thousand more: According to this Tenure likewise, doth the known Prophecy of Elias (not the Tisbite, but a later Learned Rabbi) run in his Reckoning, that as there weree 2000 y. (plus minus) before the Law, and 2000 y. (more or less) under the Law: So there are to be 2000 v. also under the Gospel: Agreable also to these a former Computations, is the Notion of comparing the fix Thousand vears of the Worlds Redemption (whereof the first four Thousand belong'd to the prophetical Office of Christ, and the last two Thousand to his Sacerdotal or Prieftly) unto the fix first Days of the Worlds Creation. Because both the Old and New Testament do testify, that a Thousand Years with God are as one Day. Pfal. 90,4, and 2. Pet. 3. 8. As likewise because God promifeth to shew Mercy to a 1000 Ge. nerations; that is, (as some interpret it) for 7000 y. For as after the 6 Days came the Sabbath, so after the fix Thousand comes the 7th or Sabbatical Millennium: And after the prophetical and priestly Offices be accomplished in the four and two Thousand (as aforesaid) then begins his Regal Office, wherein he takes to himself his great power and Reigns. R. vel. 11, 15, 17. for which He hath been in long Expectation, Hebr. 10 13. with 1, 13. and Pf. 110, 1. and 1. Cor. 15, 24. 25. this is his Kingly Office. (7) These aforesaid Divisions of Times are Indeed Fair and plausible, but as they are not Divine and Scriptural, (wanting a Warrant from the Spirits Inspiration) so there is (1) a plus and a minus, a more and a less Attending them; and if the two former periods, why not the latter: (2) Christ hath said that this latter period shall be To riened for the Elects Cake, Matth. 24, 22. which words may have a special Relation to the world in general, as well as to ferusalem in particular. (3) There is a German Doctor, who tells us, we have loft more in the Chronology of Time than Two Hundred years (4) Confider that Ticho Brahe calls the Former Epoches of great Revolutions Uneven ones, and why may not this last be fo: (5) Remember how the Antients make 960, y. betwixt one Climatterical Conjunction and another, this will Alvance &c. (6) fo will a Reckoning from Christs Ascension, and not from his Birth: (7) This Ilanetary Revolution being the 7th we may expect the fooner a Restitution of all things All Sabbatick Circulations are Reputed as Rings of Gold, and the 7th is the Diamond and Sparkling Jewel of Daily, Montbly and Annual Revolutions. I shall therefore Conclude with this precious double ; th (both in the paragraph and in the Subdivision) and with that old Hebrew prayer [Bimerah Bejamenu] let this 7th Millennium or Blessed Jubilee come nickly, and in our Day Before we be lodged in the filent Grave; even so, Come Lord Jesus, come quickly. So prayeth C. N.

FINIS.

POST-SCRIPT.

Tis true when this Sabbatick Jubilee shall begin, no morral man can determin the Hour, Day, Month, or Year, Tacente Scriptura Taceamin O' nos; where the Scripture hath not a Mouth to fpeak, we should not have a Tongue to aik: no man nor Angel knows when the Soul of man will come to Restore att things, Matth, 24, 36. Ads 2,21. The Truth is Certain, that it shall be, but the Time is Vncertain, when it will be: for the Scripture is filent upon a 2 fold account (1) to suppress var Curiofity:corum que fcire, net datur,net fas eft, Docta eft Ignorantia faith Austin: An Irch of knowing secrets is a fort of madness faith Galding Areana Dei funt Arca Dei, a prying into Gode Sacrets (which belong) not to me Deut. 29, 29, may have the same measure with presumptuous prying into Gods Ark. I.Sam. 6, 19, and Peter gives the fame charge: against Curiofity, as against Theft or Murder, 1. Pet. 4, 15. Tu fuge con peftem min monumes susovim. To be too pragmatical and inquificive after matters unrevealed, falls under a severe Reproof Allet, 6,7,11, Ande. 13, 18. God hath fet us our Bounds (as Exod 19, 12.) His Revealed will, we must be wife to Sabriety, not above what switten. The 2d Account is, to oblige our Vigilancy, Idea later vous Dies, ut observentur omnes faith Auftin. Christ would not tell his Disciples the day or time of his Return (though he sold them all that was expedient fohn 14,2, & 16,7. yet pronounces them 3 times Happy, that are always upon their watch, Lake 12, 37, 38, 43. fo Mark 13. 37.

Nevertheless, we may safely say, this Day of Redemption Draweth migh, and must now be at the very Door as may surther be Demon-

frated, as it is with the Microcosm or little World (Man) so 'tis with the Microcofm or great World: As Mansfirst Age is Infancy reckon'd from his Birth till he be 7 y. old: His 24 Age is Childhood from 7 to 14. His third is Adolescency or his stripling Age from 14 to 21. His fourth is his Youth from 21 to 35. His fift is his middle Age or Fulness of Strength which lasts from 35 to about 50. (these 2 last are uneven Numbers, lasting longer in the Course of Nature, than the former? wherein Natural Vigor is shooting up in growth; as a plant till it come to its 'Axun or full Strength; then comes the fixt his old Age. wherein he declines daily and droops towards the Earth from whence he came, therefore is it call'd the evil Age Eccles. 12, 1. (fenium & malum are convertible Terms) because it is attended with manifold Maladys and Miferys, then he faith with I faac [Behold now I am old and I know not the Day of my Death] Gen. 27, 2. and with facob | behold I dye, and the Time draweth nigh that I must dye] Gen. 47,29. and 48, 21. and with Paul [I protest that I dye daily] 1, Cor. 15, 21. Even fo it is with the great World whose Infancy was to Enoch the first Climacterical Conjunction, it's Childhood to Noah at the second, it's Adolescener to Moles at the third; it's Youth to Solomon & c. at the fourth; it's middle Age to Christ at the fift, it's old Age brings in Charls the Great at the fixt: This is further illustrated thus, Paul the Apostle adjusteth this Metaphor, not only comparing God to a great Householder who disposerh of Times to his Familythe World (as the word Forwordia) fignifies) in which Dispensation, there is a Time of Tutorage, Pupillage and Pedagogy (which comprehends all those Times before Christ. whose coming in the Flesh He calls the Fulness of Time twice over. Gal. 4. 1, 2, 3, 4. and Eph. 1, 10. that is, the full grown Age of the World and of the Church in the World to be freed from Wardford Co. And the same Apostle calls the Times afterwards the Ends of the World. I. Cor. 10, 11. which can fignify no other than its old Age. the very Lees and Dregs of Time: So the fame Apostle calls them the last (and therefore the worst) Days. 2. Tim. 3,3. and the Lord is at Hand. Phil. 4, 5. the Author to the Hebrews calls them also the last Days Hebr. 1, 2. and the End of the World Hebr. 9, 26. and the Apostle Fames faith the Coming of the Lord draws nigh, and the Judge is standing at the Door I am 5, 7,8,9. and the Apostle Peter laith, the End of all things is at Hand. I. Pet. 4. 7. and 2. Pet. 3. 3. and fohn the Apoffle faith exprefly, it is the last Time, and we know it is the last Time. I John 2. 18. and He further addeth, yet a little while, and Christ will come quick-In Revel. 1. 7 and 3, 11 and 22, 7, 12, 20. So that all the Apostles feem to expect then the End of the World, and Paul points to his own Body, when he faid [this Corruptible Shall put on Incorruption &c.] I. Cor.

1 Cor. 15, 53. and expected by the coming of Christ, to be Changed rather than to Die, I Theff. 4, 17 vet after, other things were Revealed to him, 2 Theff. 2, 2, 3. &c. And fo to fohn likewife in his Seal aud Book - prophely, Wherein he discovers, I. The Fata Imperis, 2. the Fata Ecclefia (as a Seal represents the State, and a Book the Church) All to be Accomplished before the End, or they might have Respect to the 3 Ages of the World (according to Elim's Diffribution) 1. before 2. under the law, 3 under the Gofpel, no New Rule or Revelation was to be expected after this last Which they therefore call debe end of the World: However they had defired to know some Signs of Christs coming and of the End of the World Matth 24, 3. Thinking verily that the World could not stand longer than the Temple, nor possibly outlast it, as if it had been the Atla and principal Pillar to Supportit for Siting mhad faid fat its creeting and Dedication, I I have fundy built God an honfe to dwell in for ever. & Kin 8, 13, and 2 Chron 6, 2 that is, To long as the World stands it shall stand, which was but condition mal, Hence the Disciples jumble these 3 questions rogether 1. what be the Signs of the Temples Ruine, 2. of Christs (cond coming, and a) of the End of the World The Lord Answers all the Three in declaring diffinct Signs of fernfalems Destruction, and promiferously mixing them with the other, but in v. 30. He fingles out a Sign of his own last x and most glorious coming, which some suppose may be some Extraordinary Comet or Blazing Star, as his first Coming was by a Bright 1 Star, that led the Wifemen to Bethlehem; and if fo many prodigralar tended Christs paffion, furely many more mayarrend his Recorn in Gloryand the end of the World, many firange Commonons in Heaven, Earth and Sea, Luke 21, 29. and Murrh 12 416, 7, 19. Houses usually gived great Crack when they are Ready to fall, and to will the Great Home of the World, yet may there be formes pace betwirt the Sign and the thing fignifyed, The end may be neer, but not yet, Matth 24, 88, 33. Luke 21, 9. Therefore the faid That day wild hour knowers no mith Maith 24 36, not Angels, neither the Son, but who Father only, Mark 13.32. Ordine videlicet (tiendl'a fejnon ab aton The Son knows ir not fin his humble State) but from the Pather, as he sublikes and workerh from him, John 4,19. de 20. point from whence they took their Progress at the first, and where that was, who knowes it was a wear a subject to the way.

The Dutch Divine Shelter (, whole Book is call d a semfertable Different of Christs advantage, translated by Mr. Thomas Rogers the Publisher of our 39 Articles) concurs with Elians Notion of the Worlds lasting but 6000 y, and lasts, Orphes Verse imports it should

now got under him a little oblique to the Right land, to hath made more than Sensithiding Medianton from the late.

ther Diffance. There may be a That is, in the fixt Age or Thousand God will destroy the World which not only Plato but Caspar Penserus applauds: He makes Enoch a Figure of the last Time, the 7th Millennium, for as Death had Dominion over the fix first Patriarks, Adam, Seth, Enus, Kenan, Maha-Lileel and fared (who all dyed) but upon the 7th from Adam, Enocha Death had no power: So Death shall have Dominion over Mankind for 600 y. but at the 7th, Death shall loofe its Sting : This great Truth Lude hints at in v. 14, 14. faving Enoch the 7th from Adam foretold Christs last coming: Thus lasto Elizs (call'd the 7th from Adam by Computation, as Engch is by Generation.) feems a Type here. of, for fix Prophets (to wit, Adam, M thufalah, S m. Jacob, Amran and Abiah) went before him, then was Elias the 7th, who was traille. ted likewise, to shew that the 7th Millennium will bring the like Glos ry: Yet Hatbinks (Chap. 2 and 3) that Christ will come before the 6000 y, be expired. For (Ift.) the Sabbanb began at the Evening of the first Day before it was quite expired. (217) Elies (in Talmud) faith, some years shall be wanting, for Christ will hasten his coming because of wickedness (34) to omit his 4 Esdras 5,45 &c. which admits of Exception, this agrees with Christs words, Math. 24, 22. (4sbly)never fo many Eccliples, Comiets, Conjunttions &c. for many Hundred y. past, which are Signs of Christ hasting to come, to which I add (sthis Christ hath 6 Comings all exprees in Scripture) betwixt his first and last, as (1) after his Resurrection. (2) at Pentecost (3) at Retulalenes Ruived (4) no the of Churches of Afia (4) in the 6 Seals (6) to destroy Amichrift: And (6ly) this Trebble great Conjunction may wher in hislaft, being hard to paralel it, Saturn began his Direct inotion March 23 (82 meets Impiter October 9th after begins Retrograde giber 20 (as fupiter doth on 26) fo they meet again on fan. 30 (83 and Supiter begins his Direct Motion on March 26. (83. fo they meet again on May the 2483.) Luther on Gen. I faith, oportet ingenis lufus (mos concedere, modo absit superstition Mr. Greenhil takes this liberty in his Fast Sermon (43 April; as a great Conjunction viher'd in Ril ming of the old fernfalen formay this at Reaning of the New All thefe

Comercand Conjunctions cannot be Dumb Signs, but warn us of Good or Evil according as we are. I faw Mars in Confunction with the Moon on this 16 of 86er, while the Superior Planets were in theirs hard by, & Suram on the 18th got above Inpiters Perpendicular, yet not much varying their Diftance. Upon this 19 of 8ber I observed, that Jupiter which was above Saturn in a Perpendicular line before, is now got under him a little oblique to the Right hand; fo hath made more than a Semi-circular Motion about him, though at a little farther Distance. There may be a Mystery in this Motion, especially if Benign Jupiter gain the Upper hand of Sullen Saturn again : Suppose the worft, that the last Bue of the Beaft be not yet over; but he firall once more I read under foet the outer Court (as Bp. Ufber faith) in more easily come at the Wirntfes in the Temple to flar them, yet hall they have a speedy Resurrection and Ascension &c. Let therefore this 7th and last great Conjunction be reckou'd (if not a Spectator) at least a esting of the 7th Trumpet and 7th Vial, which will as certainly destroy Amichristianism (yea and Mahometanism toon as furo as the 706 Seal hath destroyed the Heathenism of the Roman Empire, and to Voter in the New Jerufalem. The course of these Planers are call ditte Clocks of Goda Eternal Counfels: Tellingthe Times of greateff Res Clocks of Goods Elernal Couniels: Telling (the I imes of great and said short Engels & Translation(2) Noahs Flood, (1) Moles Deliverance (4) So lomens Glory () Christ's Redemption (6) Charls the Greats Greatings, and (7) the Lambs Marriage with the Bride, oh that our Redeemer may be as a Recekipping over Mountains to ruine the Reprobate, and re ward the Righteous, Let not Men feer, where they thould Fear, Pet 22 2 .. 66 becaused wasted ets (31) to ourse
